Introduction to the Atlassian IDE Connector

The Atlassian IDE Connector is an add-on for your integrated development environment (IDE). It allows you to work with the Atlassian products within your IDE. Now you don't have to switch between websites, email messages and new feeds to see what's happening to your project and your code. Instead, you can see the relevant JIRA issues, Crucible reviews and Bamboo build information right there in your development environment.

The Atlassian IDE Connector is available for IntelliJ IDEA and Eclipse. In the future we would like to support other IDEs too, such as Visual Studio. Take a look at the documentation for each IDE:

- Atlassian Eclipse Connector
- Atlassian IntelliJ Connector

We are actively developing the Eclipse Connector

If you'd like stay informed, enter your email address on this web page and we'll send you an update when the Eclipse Connector is available.

About the Atlassian Eclipse Connector
The Atlassian Eclipse Connector is an Eclipse plugin. It allows you to work with the Atlassian products within your Eclipse IDE. Now you don't have to switch between websites, email messages and news feeds to see what's happening to your project and your code. Instead, you can see the relevant information right there in your development environment. The current version of the Atlassian Eclipse Connector integrates Bamboo build information into Eclipse.

Current released version:
The Atlassian IDE Plugin for Eclipse version 1.0 beta has now been released — see the Atlassian Eclipse Connector 1.0 Beta Release Notes.

Offline Versions of the Documentation
You can download the Atlassian Eclipse Connector documentation in PDF, HTML or XML formats.

- Installation in Short
- Installation in Detail for Eclipse 3.4 (Ganymede)
- Installation in Detail for Eclipse 3.3 (Europa)

System Requirements

Version Matrix

The Atlassian Eclipse Connector is compatible with the following software versions:

<table>
<thead>
<tr>
<th>Software</th>
<th>Atlassian Eclipse Connector 1.0 or later</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bamboo</td>
<td>1.x</td>
</tr>
<tr>
<td></td>
<td>2.x recommended</td>
</tr>
<tr>
<td>Crucible</td>
<td>1.6 or later</td>
</tr>
<tr>
<td></td>
<td>⚠ We recommend that you upgrade to the latest version of Crucible 1.6.x for best results.</td>
</tr>
<tr>
<td>Eclipse</td>
<td>3.3 (Europa) or later</td>
</tr>
<tr>
<td></td>
<td>3.4 (Ganymede) recommended</td>
</tr>
<tr>
<td>JIRA</td>
<td>3.4 or later</td>
</tr>
<tr>
<td></td>
<td>3.7 or later recommended</td>
</tr>
</tbody>
</table>

Other Dependencies

- The Atlassian Eclipse Connector makes use of Mylyn's task-focused interface. Mylyn is shipped with the more recent versions of Eclipse.
  - If you do not already have Mylyn, it will be installed automatically when you install one of the Atlassian Eclipse Connector's features.
  - The Mylyn documentation includes a quick start guide.
- The Atlassian Eclipse Connector now includes the JIRA Mylyn connector, which was previously available as a JIRA-only connector.
- The connector's Crucible review functionality integrates with Subversion and Subclipse for source control and file retrieval.

⚠️ Crucible code reviews for Subversion with Subclipse only
Currently the Atlassian Eclipse Connector supports code reviews only where you version your project under SVN using Subclipse. The connector does not (yet) integrate with Subversive. We intend to add support for other SCMs, such as CVS, via the connector’s integration with Crucible, so that the connector will support the SCMs which Crucible supports.

Installation in Short

1. Add one of the following URLs to your Eclipse update sites, depending on your version of Eclipse:
   - For Eclipse 3.3 — [http://update.atlassian.com/atlassian-eclipse-plugin/e3.3](http://update.atlassian.com/atlassian-eclipse-plugin/e3.3)
   - For Eclipse 3.4 — [http://update.atlassian.com/atlassian-eclipse-plugin/e3.4](http://update.atlassian.com/atlassian-eclipse-plugin/e3.4)
2. Install the 'Atlassian Eclipse Connector' — we suggest that you select the 'recommended' option.
Installation in Detail for Eclipse 3.4 (Ganymede)

The steps below show the full installation procedure in Eclipse 3.4 (Ganymede):

1. Open the Eclipse software updates manager via 'Help', 'Software Updates', 'Available Software'.
2. Click the 'Add Site' button.
3. The 'Add Site' dialogue box will appear, as shown in the screenshot below:

   ![Add Site Dialogue Box](image)

   Enter one of the following URLs, depending on your version of Eclipse:
   - For Eclipse 3.3 — [http://update.atlassian.com/atlassian-eclipse-plugin/e3.3](http://update.atlassian.com/atlassian-eclipse-plugin/e3.3)
   - For Eclipse 3.4 — [http://update.atlassian.com/atlassian-eclipse-plugin/e3.4](http://update.atlassian.com/atlassian-eclipse-plugin/e3.4)

4. Click 'OK'.
5. The 'Atlassian Eclipse Connector' will appear in the list of available software, as shown in the screenshot below:
Select the components that you wish to install. We suggest that you select the 'recommended' option to install the default integration options (Bamboo, Crucible, JIRA and Subclipse). Otherwise, you can choose one or more of the following integration options:

- **Bamboo Integration** — Allows you to view and manage your Bamboo builds within your Eclipse IDE.
- **Crucible Integration** — Allows you to view and manage your Crucible code reviews within your Eclipse IDE.
- **Subclipse Integration** — Provides fine-grained integration between Subclipse and Crucible reviews within your Eclipse IDE.
- The installation process will automatically provide the connector's JIRA integration, allowing you to view and manage your JIRA issues within your Eclipse IDE.

6. Click the 'Install' button, then click 'Finish' when asked to confirm the installation.
7. If prompted, accept the license agreement and click the 'Next' button.
8. Restart Eclipse when prompted.
9. The Atlassian Eclipse Connector has now been installed. Your next step is to add your Bamboo, Crucible and JIRA task repositories in Eclipse. See **Configuring the Eclipse Connector**.

**Installation in Detail for Eclipse 3.3 (Europa)**

We have not yet included detailed instructions for installation under Eclipse 3.3 (Europa). The screenshot below shows the selection of required dependencies:
Select the features to install:

- Atlassian Eclipse Connector
- Atlassian Connector
- Atlassian Eclipse Connector (recommended) 1.0.0.i20090315-0200
- Atlassian Integrations (optional)
- Mylyn Weekly for Eclipse 3.3
  - Mylyn Features
    - Mylyn Task List (Required) 3.1.0.i20090311-1900-e33
    - Mylyn Focused UI (Recommended) 3.1.0.i20090311-1900-e33
  - Mylyn Integration
  - Mylyn Weekly Extras
  - Mylyn Integration
    - Mylyn Connector: JIRA 3.1.0.i20090311-1900-e3x
    - Mylyn Connector: Trac 3.1.0.i20090311-1900-e3x
  - Mylyn Plug-in Development
- Subclipse
  - Subclipse
    - Subclipse - Required 1.4.8
    - Subversion Revision Graph 1.0.5
    - Subversion Client Adapter - Required 1.5.3
    - Subversion Native Library Adapter (JavaHL) - Strongly Recommended 1.5.6
  - Subclipse Integrations
  - Subclipse SVNKit Option
    - SVNKit Library 1.2.2.5405
    - JNA Library 3.0.9
    - SVNKit Client Adapter 1.5.6

Provides Bamboo, Crucible and JIRA integration. This feature includes Subclipse for Subversion support in the Crucible integration.

IDE Connector Documentation
Upgrading the Eclipse Connector

This page tells you how to upgrade the Atlassian Eclipse Connector. If you have never installed the plugin, please refer to the installation guide instead.

Replacing Early Versions of the 'Atlassian IDE Plugin'

If you have previously installed version 0.4 or earlier of the Atlassian IDE Plugin:

1. Uninstall the earlier version.
2. Then follow the installation guide to install the new Atlassian Eclipse Connector.

Upgrading the Atlassian Eclipse Connector 1.0 Beta or Later

If you are upgrading from version 1.0 beta or later of the Atlassian Eclipse Connector, you can follow the standard Eclipse software upgrade procedure.

These are the steps in the standard upgrade procedure for Eclipse 3.4 (Ganymede):

1. Open the Eclipse software updates manager via 'Help', 'Software Updates', 'Installed Software'.
2. The 'Installed Software' screen will appear, as shown in the screenshot below:

Open the 'Automatic Updates' preference page to set up an automatic update schedule.
Select the required components of the 'Atlassian Eclipse Connector' and click the 'Update' button.

3. When prompted, verify the installation details and click the 'Next' button.
4. If prompted, accept the license agreement and click the 'Finish' button.
5. When prompted, restart Eclipse.

23 March 2009

With pleasure, Atlassian presents the Atlassian Eclipse Connector 1.0 Beta.

Atlassian and Tasktop have collaborated to build a new connector with a radically changed look and feel and a wealth of new features. The resulting connector makes use of Mylyn’s task-focused interface to bring new level of integration between your Eclipse Mylyn IDE, your Crucible code reviews and your Bamboo builds. The new connector also includes the existing JIRA Mylyn plugin.

With the Atlassian Eclipse Connector, you can set up your JIRA, Bamboo and Crucible servers as Eclipse Mylyn task repositories. Monitor your Bamboo builds and re-run failed tests locally. Enjoy Crucible’s lightweight workflow to conduct code reviews within your IDE. The JIRA issues and Crucible reviews are seen as tasks, allowing you to make use of Mylyn’s powerful task and context management features. Instead of dropping out to view your email, you will now receive your issue, review and build notifications via the standard Eclipse notification popups.

Highlights of this Release:

<table>
<thead>
<tr>
<th>Crucible Reviews in Eclipse</th>

</tr>
</tbody>
</table>

Don't have the Atlassian Eclipse Connector yet? You can install the connector directly from the 'Software Updates' option in Eclipse. Follow our easy installation guide.

This is an open source project. The source code is available in our SVN repository.

Upgrading from a previous version of the IDE Plugin for Eclipse

If you have previously installed an earlier version of the Atlassian IDE Plugin for Eclipse, please uninstall the earlier version. Then follow the installation guide to install the new Atlassian Eclipse Connector.

Crucible Reviews in Eclipse

Enjoy Crucible’s lightweight workflow to conduct code reviews within your IDE. Using the connector, you can handle your Crucible reviews as Eclipse Mylyn tasks and take advantage of Mylyn’s powerful context management features. In addition, you can perform much of the review workflow without leaving your IDE.
Manage your Code Reviews via Mylyn's Task-Focused Interface

- Set up your Crucible server as a task repository.
- Build Mylyn queries to filter your reviews, based on the Crucible server filters or your own custom criteria.
- Manage the reviews in the Mylyn task list.
- Take advantage of Mylyn's context management to keep track of the files and other assets associated with your review.

Conduct your Code Reviews in your IDE

- See the review details, files and comments in an Eclipse view.
- Create and reply to comments.
- Summarise and close the review or perform other review workflow actions from within your IDE.
See the Review Comments in Your Code

- See the comments annotated in your file editor.
- Add comments directly in the editor.
Work on the Review in the Diff View Too

- Open a diff view to see the changes under review, with the comments highlighted.
- Add comments directly in the diff view too.
Receive Notification of Review Updates

- Receive notification of new reviews needing your attention.
- See what's happening in your reviews, via the Atlassian Eclipse Connector's integration with the standard Eclipse notification messages.
Bamboo Builds in Eclipse

Using the Atlassian Eclipse Connector, you can set up your Bamboo server as a Mylyn task repository. Now you can choose the builds you want to monitor and view the build results, build logs, changed files and failed tests inside your IDE.

Configure your Bamboo Server as a Mylyn Task Repository

- Configure your Bamboo server as a task repository.
- Choose the builds you want to monitor from within Eclipse.
Manage your Bamboo Builds in your IDE

- View the status of your selected builds.
- Right-click a build line to act upon it.
- Re-run the build.
- Add a label or comment to the build.
- Double-click the build to open it in an Eclipse view.
View the Build Logs

- Open the Bamboo build log in your Eclipse Console view.
View the Changed Files

- See the changes that triggered the build.
Monitor the Failed Tests

- See the test results for the selected build.
- Re-run the failed tests locally, to make sure your fixes work before breaking the build again.
- Create a new Mylyn task from the failure. This Mylyn task could be a JIRA issue.
Receive Notification of Build changes

- Receive build notifications via the Atlassian Eclipse Connector's integration with the standard Eclipse notification messages.
JIRA Issues in Eclipse

The new connector incorporates the JIRA Mylyn plugin, which was previously available as a JIRA-only connector. Configure your JIRA server as a task repository. Use Mylyn's context management to keep track of the files and other assets associated with your issue.

Use the Awesome JIRA Mylyn Plugin as Part of the New Connector

- Configure your JIRA server as a task repository.
- Build Mylyn queries to filter your issues, based on your JIRA server filters or on custom criteria.
- Manage the issues via the Mylyn task list.
- Take advantage of Mylyn's context management to keep track of the files and other assets associated with your issue.
- Create a new JIRA issue and edit existing issues.
- Add and reply to comments.
- Receive notification of updated issues.

1 August 2008

With pleasure, Atlassian presents version 0.4 of the Atlassian IDE Plugin for Eclipse.

This release brings further enhancements to the Bamboo support in the plugin. You can now connect to multiple Bamboo servers instead of just one. For each of your build plans, you can now show the full build log within the Eclipse IDE.

Highlights of this Release

Bamboo Servers View

- There are now two Bamboo views: 'Bamboo Servers' and 'Bamboo Watched Plans'.
- The 'Bamboo Watched Plans' view shows the information for your selected build plans, as in previous versions of the plugin.
- The new 'Bamboo Servers' view allows you to add Bamboo servers and view the plans defined on each server.
- You can now connect to multiple Bamboo servers instead of just one.
You can now show the full build log within the Eclipse IDE. Just select the build plan, then click the 'Show Build Log' icon in the toolbar.

Atlassian IDE Plugin 0.3 for Eclipse - Release Notes

This page last changed on Mar 12, 2009 by smaddox.

Plugin version 0.3 requires Eclipse 3.4

Update on 25/7/2008: From version 0.3 of the Atlassian IDE Plugin, you will need Eclipse version 3.4.0 or later. For more information, see PLE-46.

18 July 2008

With pleasure, Atlassian presents version 0.3 of the Atlassian IDE Plugin for Eclipse. Here are the highlights of this release:

- A new Bamboo icon in the Eclipse status bar shows the summary status of builds: red means at least one build is currently failing; green means all builds are passing.
- The configuration screen allows you to select your favourite build plans as defined on the Bamboo server.
- You can now add labels and comments to your build plans (Bamboo 2 only).

Below is a list of all the fixes and improvements in this release.

The Atlassian IDE Plugin is available for IDEA too

Take a look at the release notes for the IDEA version of the plugin.

Don't have the Atlassian IDE Plugin for Eclipse yet?

Take a look at the features in the Plugin User Guide. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

The plugin's blog

From time to time, the plugin development team posts some information on the plugin's blog.

Atlassian IDE Plugin 0.2 for Eclipse - Release Notes

This page last changed on Mar 12, 2009 by smaddox.

3 July 2008

With pleasure, Atlassian presents version 0.2 of the Atlassian IDE Plugin for Eclipse.

Here are the highlights of this release:

- The configuration screen allows you to select your Bamboo build plans from a list, rather than typing them into a text box.
- The new 'Test Connection' button lets you verify the connection data you have entered, by connecting to the Bamboo server.
- The new 'Refresh' button lets you retrieve the list of build plans, using the most recent data entered into the form.
- A notification in the Eclipse status bar lets you know the status of background plugin activities, such as retrieving the list of plans or the build status.

Below is a list of all the fixes and improvements in this release.

The Atlassian IDE Plugin is available for IDEA too

Take a look at the release notes for the IDEA version of the plugin.

Don't have the Atlassian IDE Plugin for Eclipse yet?

Take a look at the features in the Plugin User Guide. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

Atlassian IDE Plugin 0.2 for Eclipse - Upgrade Notes

Below are some essential notes on upgrading to version 0.2 of the Atlassian IDE Plugin for Eclipse. For details of the new features and improvements in this release, please read the Release Notes.

Upgrade Instructions

1. Please upgrade as usual. Instructions are available in the Upgrade Guide.
2. After upgrading, please change the name of your existing configuration file from
   atlassian_eclipse_plugin.prefs
   to
   atlassian-eclipse-plugin.prefs
   (replacing the underscores with hyphens).

Background Information

For the first time in this release, we built the release automatically using Maven with an Ant script. A side effect is that your plugin configuration data will be empty after upgrade. To retrieve the configuration data, change the file name as described above.

23 June 2008

With pleasure, Atlassian presents version 0.1 of the Atlassian IDE Plugin for Eclipse. Highlights of this release include:

- You can configure the polling interval that the plugin will use to monitor the Bamboo build plans.
- Bamboo will now notify you of build failures and successes via a popup. The popup’s behaviour is configurable via the plugin's Preferences window.
- You can change the order of the columns in the Bamboo view. The plugin will remember the column order the next time you start Eclipse.

The Atlassian IDE Plugin is available for IDEA too

Take a look at the release notes for the IDEA version of the plugin.

This page tells you how to set up your JIRA, Bamboo and Crucible servers as task repositories in Eclipse.

On this page:

- Prerequisites
- Setting Up your Task Repositories
  - Setting Up a Bamboo Task Repository
  - Setting Up a Crucible Task Repository
  - Setting Up a JIRA Task Repository

Prerequisites

Before you can set up your task repositories for the Atlassian Eclipse Connector, you will need to do the following:

- Install the Atlassian Eclipse Connector connector as described in the installation guide.
- The Atlassian Eclipse Connector makes use of Mylyn’s task-focused interface. Mylyn is shipped with the more recent versions of Eclipse.
  - If you do not already have Mylyn, it will be installed automatically when you install one of the Atlassian Eclipse Connector’s features.
  - The Mylyn documentation includes a quick start guide.

Setting Up your Task Repositories

1. In Eclipse Mylyn, open the 'Task Repositories' view. (In Eclipse, click 'Windows', 'Show View', 'Other' and select the 'Task Repositories' view from the 'Tasks' category.)
2. Click the 'Add Task Repository' icon.
3. The 'Add Task Repository' screen appears, as shown below:

4. Now you can select and configure one or more of the task repositories and configure them to match your server(s). Below are instructions for each of the repositories available in the Atlassian Eclipse Connector.

Once you have set up a repository, it will appear in the Eclipse 'Task Repositories' view, as shown in the screenshot below:
Setting Up a Bamboo Task Repository

1. On the 'Add Task Repository' screen (see above), select the 'Bamboo' task repository type and click 'Next'.
2. The 'Bamboo Repository Settings' screen appears, as shown below:
3. Enter the following information:
   • Server — The location (URL) of your Bamboo server.
   • Label — A descriptive name for your Bamboo server, e.g. 'Bamboo Extranet'.
   • User ID — The username you use to connect to your Bamboo server.
   • Password — Your password on the Bamboo server, matching the above username.
4. Click the 'Refresh' button to verify the information you have entered. The connector will attempt to connect to the Bamboo server. It will also retrieve the latest list of build plans from the Bamboo server.
5. Select the plans that you want the connector to watch.
6. Click 'Finish' to save the changes.
7. The new task repository appears in your Eclipse 'Task Repositories' view, as shown in the screenshot above.
8. Next step: To see your Bamboo builds, open the 'Bamboo' view. (Select 'Window', 'Show View', 'Other', then open the 'Atlassian' folder.)

You can configure one or more Bamboo repositories, i.e. you can connect to more than one Bamboo server.

Setting Up a Crucible Task Repository

1. On the 'Add Task Repository' screen (see above), select the 'Crucible' task repository type and click 'Next'.
2. The 'Crucible Repository Settings' screen appears, as shown below:

   Enter Crucible server information

   Server: https://extranet.atlassian.com/crucible
   Label: Extranet Crucible
   User ID: myname
   Password: ********

   HTTP Authentication
   Proxy Server Configuration

   Create new account  Change account settings

   Validate Settings  < Back  Next >  Finish  Cancel

3. Enter the following information:
   • Server — The location (URL) of your Crucible server.
   • Label — A descriptive name for your Crucible server, e.g. 'Extranet Crucible'.
   • User ID — The username you use to connect to your Crucible server.
   • Password — Your password on the Crucible server, matching the above username.
4. Click 'Finish' to save the changes.
5. Eclipse Mylyn will prompt you to add a new query for the new Crucible repository. This is where you will choose your Crucible filter, to determine which reviews appear in your task list. You can do this now or skip this step and do it later. You can also add more queries later.
6. The new task repository appears in your Eclipse 'Task Repositories' view, as shown in the screenshot above.

You can configure one or more Crucible repositories, i.e. you can connect to more than one Crucible server.

Setting Up a JIRA Task Repository

1. On the 'Add Task Repository' screen (see above), select the 'JIRA' task repository type and click 'Next'.
2. The 'JIRA Repository Settings' screen appears, as shown below:

3. Enter the following information:
   • Server — The location (URL) of your JIRA server.
   • Label — A descriptive name for your JIRA server, e.g. 'JAC'.
   • User ID — The username you use to connect to your JIRA server.
• Password — Your password on the JIRA server, matching the above username.
4. Change the optional additional settings if necessary.
5. Click 'Finish' to save the changes.
6. Eclipse Mylyn will prompt you to add a new query for the new JIRA repository. This is where you will choose your JIRA filter, to determine which issues appear in your task list. You can do this now or skip this step and do it later. You can also add more queries later.
7. The new task repository appears in your Eclipse 'Task Repositories' view, as shown in the screenshot above.

You can configure one or more JIRA repositories, i.e. you can connect to more than one JIRA server.

About the Atlassian IntelliJ Connector

The Atlassian IntelliJ Connector is an IntelliJ IDEA plugin. It allows you to work with the Atlassian products within your IDE. Now you don't have to switch between websites, email messages and news feeds to see what's happening to your project and your code. Instead, you can see the relevant JIRA issues, Crucible reviews and Bamboo build information right there in your development environment.

Current released version: Atlassian IntelliJ Connector 2.0.1 has now been released — see the Atlassian IntelliJ Connector 2.0.1 Release Notes.

Offline Versions of the Documentation

You can download the Atlassian IntelliJ Connector documentation in PDF, HTML or XML formats.

Installing the IntelliJ Connector

This page last changed on Feb 26, 2009 by smaddox.

On this page:

- System Requirements
- Installation the Easy Way
- Installation the Hard Way

System Requirements

The Atlassian IntelliJ Connector (previously called the Atlassian IDE Plugin) works with the application versions listed below.

<table>
<thead>
<tr>
<th></th>
<th>Atlassian IDE Plugin 1.x</th>
<th>Atlassian IntelliJ Connector 2.x</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Bamboo</strong></td>
<td>1.x</td>
<td>1.x</td>
</tr>
<tr>
<td></td>
<td>2.x recommended</td>
<td>2.x recommended</td>
</tr>
<tr>
<td><strong>Crucible</strong></td>
<td>1.5</td>
<td>1.6 or later</td>
</tr>
<tr>
<td></td>
<td></td>
<td>! Earlier versions of Crucible are not supported.</td>
</tr>
<tr>
<td><strong>JIRA</strong></td>
<td>3.7 or later</td>
<td>3.7 or later</td>
</tr>
<tr>
<td></td>
<td>3.12 or later recommended</td>
<td>3.12 or later recommended</td>
</tr>
<tr>
<td><strong>IntelliJ IDEA</strong></td>
<td>7.0.2 or later, but not including IDEA 8</td>
<td>7.0.2 or later, including IDEA 8.0</td>
</tr>
</tbody>
</table>

**JDK**

Java 5

Installation the Easy Way

1. Open the IDEA plugin manager. (Go to IDEA's 'File' menu and select 'Settings', 'IDE Settings', 'Plugins'.)
2. Right-click 'Atlassian' in the 'Available' plugins tab.
3. Select 'Download and Install'.

Installation the Hard Way

2. Select the directory with the latest version.
3. Click the 'Downloads' link.
5. Unzip it into your IDEA plugin directory:
   - Windows: C:\Documents and Settings\<username>\.IntelliJIdea70\config\plugins
   - OS X: $HOME/Library/Application Support/IntelliJIDEA70
   - Linux/Unix: $HOME/.IntelliJIdea70/config/plugins

Overview of the Atlassian IDE Connector
Upgrading the IntelliJ Connector

This page last changed on Jan 21, 2009 by smaddox.

The Atlassian IntelliJ Connector provides an auto-upgrade option and a manual upgrade option. Both options are described below.

Allowing the Auto-Upgrade

If the auto-upgrade feature is enabled (refer to the Configuration Guide), the Atlassian IntelliJ Connector will inform you when a new version is available, by displaying a flashing icon on your IDEA status bar.

Screenshot: IDEA showing update available for IDE Plugin

To allow the auto-upgrade:

1. Click the flashing icon.
2. A dialogue box will appear, allowing you to install the new version. You can also choose to reject the upgrade.

If you choose to reject the upgrade, you will not be notified again about the availability of this particular new version. You will be notified about the next version we release.

If you later change your mind and decide to upgrade after all, you can always trigger the upgrade manually, as described below.

3. Click the 'Yes' button to install the latest version.
4. When the latest version has been successfully installed, you will see a confirmation window:
5. Click the 'Yes' button to restart IDEA.

Triggering the Upgrade Manually

You can check for new versions of the plugin and start the upgrade manually at any time, from the plugin's configuration panel.

To trigger a manual upgrade:

1. Open the IDEA 'Settings' dialogue, go to the 'IDE Settings' section and click the 'Atlassian' icon.
2. The plugin configuration panel will open. Click the 'General' tab.
3. Select one of the following radio buttons:
   - 'Stable only' — checks for released versions of the plugin only.
   - 'Stable + snapshot' — checks development as well as released versions.
4. Click the 'Check now' button. The plugin will check for the latest version.
   - If you already have the latest version, you will see something like this:

5. Click the 'Yes' button to install the latest version.
6. When the latest version has been successfully installed, you will see a confirmation window:

7. Click the 'Yes' button to close IDEA.
8. Restart IDEA.

16 February 2009

With pleasure, Atlassian presents the Atlassian IntelliJ Connector 2.0. Over the past weeks, we have been working on the IntelliJ Connector and issuing regular beta releases. Now we are proud to release the final version 2.0.

The connector now offers the same look and feel for JIRA issues, Bamboo builds and Crucible reviews. The connector's windows all open as IDEA tool windows, appearing by default at the bottom of your IDE. Take a look at the highlights below, to see the new things you can do with issues, builds and reviews.

You can open a FishEye view directly from a file in the IDEA editor, or open files in IDEA by supplying a FishEye URL. There is a new FishEye-only connection for those who do not have a Crucible server.

Share your server connections across your project team while retaining your own IDE settings. The connector is now also compatible with IntelliJ IDEA 8.

Try the Atlassian IntelliJ Connector for yourself. You can install it directly from the 'Plugins' menu in IntelliJ IDEA.

---

### Highlights of this Release:

- [Highlights of the Atlassian IntelliJ Connector 2.0](#)
  - [What's New for JIRA Issues](#)
  - [What's New for Bamboo Builds](#)
  - [What's New for Crucible Reviews](#)
  - [What's New for FishEye Code Insight](#)
- [Top 30 Bug Fixes in this Release](#)

---

### What's New for JIRA Issues

- Create a changelist based on a JIRA issue, assign the issue to yourself and start work, all in a single action.
- Group your JIRA issues by project, type, status, priority or date last updated.
- Use the quick search to find any JIRA issue — the connector matches the issue key as you type.
- Set the number of issues to be displayed on a page.

---

Don't have the Atlassian IntelliJ Connector yet? Take a look at the features in the documentation. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

---

[1] Highlights of the Atlassian IntelliJ Connector 2.0

- What's New for JIRA Issues
- What's New for Bamboo Builds
- What's New for Crucible Reviews
- What's New for FishEye Code Insight
- Top 30 Bug Fixes in this Release
What's New for Bamboo Builds

• See the full build log in an IDEA window.
• View failed tests and click through from a stack trace directly to the code that failed. The source file opens in the IDEA editor.
• View the changed files, open a changed file in the IDEA editor and view the diffs.
• Re-run or debug failed tests locally.
• Filter your Bamboo builds by server, project or state and then group them by server, project, state or date.
• Get quick access to your builds with the new dynamic search.
What's New for Crucible Reviews

- Perform code reviews directly in the IDEA editor.
- Complete the entire review lifecycle without leaving your development environment.
- Find the reviewed code via the highlighted lines in your editor and the comment annotations in the diff view.
- Filter and group your reviews in the updated Crucible reviews window.
What's New for FishEye Code Insight

- Even if you do not have Crucible, you can now hook up your FishEye server to examine your source and view changesets.
- Open a file in IDEA by supplying its FishEye URL.
- Open a source file in FishEye's web interface, with just one click from IDEA.
- Use the 'copy to clipboard' option to share references to your file with others.

Top 30 Bug Fixes in this Release

Atlassian IntelliJ Connector 2.0 Beta 12 Release Notes

3 February 2009

Atlassian is delighted to present version 2.0 Beta 12 of the Atlassian IntelliJ Connector. In this release, we have concentrated on finishing the 'Comments' tab for Crucible reviews. We have also moved the private XML configuration file to the user home directory, to prevent it from being uploaded accidentally to your source control repository.

Take a look at the full list of improvements and bug fixes below.

Don't have the Atlassian IntelliJ Connector yet?

Follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

<td></td>
</tr>
</tbody>
</table>
Atlassian is delighted to present version 2.0 Beta 11 of the Atlassian IntelliJ Connector. This release focuses on finalising the user interface in the 'Builds' tab and unifying the interface for issues, builds and reviews. By default, the connector's windows now all open as an IntelliJ IDEA tool window at the bottom of the IDE window.

- The 'Builds' tab allows you to filter your Bamboo builds by server, project or state and to group them by server, project, state or date. The dynamic search box at top right grants quick access to a build. Start typing the build number into the search box. The connector will display matching builds as you type.

  Screenshot 1: Builds tab

- The 'Build' details window now opens as an IntelliJ IDEA tool window, with tabs to display the build details, changed files, tests and the build log.

  Screenshot 2: Build window showing Build Log

- The 'Issue' details window now opens as an IntelliJ IDEA tool window, with tabs to display the issue details and comments. The 'Comments' tab still needs a bit of work, scheduled for the next release.

  Screenshot 3: Issue window showing JIRA issue details
The 'Review' details window now opens as an IntelliJ IDEA tool window, with tabs to display the review details and comments. The 'Comments' tab still needs a bit of work, scheduled for the next release.

Screenshot 4: Review window showing Crucible review details

Take a look at the full list of improvements and bug fixes below.

Atlassian is delighted to present version 2.0 Beta 10 of the Atlassian IntelliJ Connector. In this release, we have focused on the Reviews and Issues tabs.

**Highlights for the Reviews tab:**

- The connector now displays the number of reviews selected, next to each heading in the left-hand filter tree.
- You can select 'All My Reviews' at the top of the filter list, to see all the reviews in which you are involved.
- The custom filter editor now appears as a popup window.
- Reviews are sorted in descending order by review key.

**Highlights for the Issues tab:**

- If you select the custom filter, the filter details now appear under the issues tree, with an 'Edit' button allowing you to define the filter.
- In the IDE Settings, you can now configure the number of JIRA issues displayed per page. (As before, you can click 'Get More Issues' to retrieve the next page of issues.)

Take a look at the full list of improvements and bug fixes below.

Atlassian IntelliJ Connector 2.0 Beta 9 Release Notes

This page last changed on Feb 10, 2009 by smaddox.

11 December 2008

With pleasure, Atlassian presents version 2.0 Beta 9 of the Atlassian IntelliJ Connector. In this iteration we have focused on the new connector's Reviews tab. Take a look at the screenshot below. Your Crucible filters are shown in a tree structure on the left of the tab, with the reviews for the selected filter shown on the right.

You can now group the reviews by author, state, project and server. In the heading for each group, the connector displays the number of reviews in the group.

The custom filter dialogue box is now much prettier and easier to use.

**Screenshot: A new look for the connector's Crucible tab**

Don't have the Atlassian IntelliJ Connector yet?

Take a look at the features described in the documentation. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

Atlassian is delighted to present version 2.0 Beta 8 of the Atlassian IntelliJ Connector. For this release, we have continued our drive to enhance the Issues tab. You can now group the JIRA issues by project, type, status, priority or date last updated. In the heading for each group, the connector displays the number of issues in the group. If an issue has subtasks, they will appear under the issue and you can collapse or expand them too.

Do you want quick access to an issue? Just type the issue key into the search box at top right of the Issues tab. The connector will display matching issues as you type.

The custom filter dialogue box is now much prettier and easier to use.

Take a look at the full list of improvements and bug fixes below.

With pleasure, Atlassian presents version 2.0 Beta 7 of the Atlassian IntelliJ Connector. In this iteration we have focused on the user interface, particularly for the connector's JIRA tab. Take a look at the screenshot below. Your JIRA filters are shown in a tree structure on the left of the tab, with the issues for the selected filter shown on the right.

Instead of mentioning the Atlassian applications by name (JIRA, Bamboo and Crucible) the connector's tabs now tell you what you are dealing with (issues, builds and reviews).

This release also brings a number of other improvements and bug fixes.

**Screenshot: A new look for the connector's JIRA tab**

Don't have the Atlassian IntelliJ Connector yet?

Atlassian IntelliJ Connector 2.0 Beta 6 Release Notes

This page last changed on Feb 10, 2009 by smaddox.

3 November 2008

With pleasure, Atlassian presents version 2.0 Beta 6 of the Atlassian IntelliJ Connector. This release focuses on compatibility with IntelliJ IDEA 8. The connector is now portable between IDEA 7 and IDEA 8. It is worth noting that the IDEA 8.0 API is not yet fully stable, so some functionality may be affected by the changing API. But all the connector's features are now available in IDEA 8 as well as IDEA 7.

Don't have the Atlassian IntelliJ Connector yet?

Take a look at the features described in the documentation. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

Atlassian IntelliJ Connector 2.0 Beta 5 Release Notes

This page last changed on Feb 10, 2009 by smaddox.

20 October 2008

With pleasure, Atlassian presents version 2.0 Beta 5 of the Atlassian IntelliJ Connector.

Highlights in this release:

• You can now re-run or debug failed tests from Bamboo within IDEA, by clicking the new icons at the top of the 'Bamboo Failed Tests' window.
• There is a new 'Open Build Details' option in the dropdown menu which appears when you right-click on a build plan. This option opens a new 'Bamboo Build' window, showing a parsed view of the build logs. The text is colour-coded and you can click through to the relevant code files.

  The new 'Bamboo Build' window will eventually contain tabs showing the build logs, changed files and failed tests. The new window will therefore replace the existing separate build windows.
• Using JIRA within IDEA, you can now create a changelist based on a JIRA issue, assign the issue to yourself and start progress, all in one click.
• You can also configure a separate FishEye server, independent of your Crucible server.

Don't have the Atlassian IntelliJ Connector yet?

Take a look at the features described in the documentation. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

With pleasure, Atlassian presents version 2.0 Beta 3 of the Atlassian IntelliJ Connector (previously known as the Atlassian IDE Plugin for IDEA).

With this release, we have renamed the Atlassian IDE plugin for IDEA to the 'Atlassian IntelliJ Connector'. The change of name should be painless for existing users — you will be able to install the latest version in the normal way, and receive the same IDEA plugin but with more features and a smoother user interface. We want a snappy name that better expresses the functionality of the connector.

Here are the highlights of this beta release:

- We have improved the user interface, making it more consistent and improving your experience of the connector.
- In the Crucible tab, the filter dropdown now shows the name of your custom filter as well as the pre-defined filters.
- The Crucible filter selection is now presented as a dialogue rather than a dropdown list, so that it is easier to select more than one filter at a time.
- The Crucible Review window has been re-organised, so that it now shows a tree view of files with comments in line. This is closer to the Crucible web interface and makes the plugin easier to use.

Don't have the Atlassian IntelliJ Connector yet?

Take a look at the features described in the documentation. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

Atlassian IDE Plugin 2.0 Beta 2 for IDEA - Release Notes

8 September 2008
With pleasure, Atlassian presents version 2.0 Beta 2 of the Atlassian IDE Plugin for IDEA. This is a beta version, because some of the plugin's new features and documentation still need a bit of polish. We are keen for you to install and try this new version, which now offers deep integration with Crucible and Bamboo, as well as the already awesome JIRA integration.

For features of beta versions, please first take a look at the release notes of Beta 1.

In this beta version, the new feature is an integration with FishEye, allowing you to open a file from the editor in the FishEye file view, as well as view changesets in Fisheye.

Don't have the Atlassian IDE Plugin for IDEA yet? Take a look at the features in the documentation. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

The Plugin's Blog
From time to time, the plugin development team posts some information on the plugin's blog.

Comments, Requests and Feedback
We would love your feedback. Please log your requests, bug reports and comments in our issue tracker.

Upgrading from a Previous Version of the Atlassian Plugin

- If you are using the Crucible integration in Atlassian IDE Plugin for IDEA, please note that version 2.0 of the plugin requires Crucible 1.6 or later.
- Please refer to the plugin's Upgrade Notes for further essential information about factors affecting your upgrade.

Atlassian IDE Plugin 2.0 Beta 2 for IDEA - Upgrade Notes

This page last changed on Jan 20, 2009 by smaddox.

Below are some essential notes on upgrading to version 2.0 Beta of the Atlassian IDE Plugin for IDEA. For details of the new features and improvements in this release, please read the Release Notes.

On this page:

- Upgrade Notes
  - Crucible 1.6 Required
  - Upgrade Procedure

Upgrade Notes

Crucible 1.6 Required

Version 2.0 of the plugin supports Crucible 1.6 and later.

⚠️ The plugin no longer supports Crucible 1.5.

Explanation: The Crucible support in earlier versions of the plugin was very limited. Crucible 1.6 provides a more sophisticated API, allowing us to present the full review cycle within the IDE. As far as we know, very few people were making use of the Crucible 1.5 support in the plugin. For these reasons, it is not worthwhile continuing with Crucible 1.5 support.

When you upgrade to the latest version of the plugin, any Crucible servers not running Crucible 1.6 will not be accessible via the plugin.

Upgrade Procedure

Please take these steps to upgrade to version 2.0 Beta of the plugin:

- If you already have version 1.6.1 of the Atlassian IDE Plugin for IDEA, you can allow the automatic upgrade to version 2.0 Beta as usual. See the Upgrade Guide.
- If you do not have version 1.6.1 of the plugin, please use IDEA's plugin manager to upgrade the plugin:
  - In IDEA, Select File -> Settings -> IDE Settings -> Plugins.
  - Click the Available tab.
  - Select the Atlassian plugin and click the Update Plugin icon at top left.

Atlassian IDE Plugin 2.0 Beta 2 for IDEA - Release Notes
3 September 2008

With pleasure, Atlassian presents version 2.0 Beta of the Atlassian IDE Plugin for IDEA. This is a beta version, because some of the plugin's new features and documentation still need a bit of polish. We are keen for you to install and try this new version, which now offers deep integration with Crucible and Bamboo, as well as the already awesome JIRA integration.

With the plugin’s Crucible support, you can now perform code reviews directly in the source editor and complete the review lifecycle without leaving your IDE. Use the dashboard-like display to view and filter your reviews. Notifications and colour coding indicate the review status and events.

On the Bamboo side, the plugin offers deeper integration now too. Remaining in your IDE, you can view the tests which failed in a build, see the stack traces and click through directly to the code that failed. Still within IDEA, view the changed files in a build, open a changed file in the IDEA editor and view the diffs. You can also show the full build log within IDEA.

The plugin now offers configuration at project level as well as IDE level. The project settings allow you to share server connections with your team members. In addition, each developer can configure their own workspace-specific settings, such as polling intervals and the behaviour of notification popups.

We have fixed a number of bugs in this release. Two JIRA fixes deserve special mention. You can now connect to a JIRA server with a self-signed SSL certificate, and you can open multiple JIRA projects in separate windows.

Take a look at the highlights and the full list of fixes below.

### Highlights of this Release:

- **Crucible Highlights in the Atlassian IDE Plugin 2.0 Beta**
  - Code Reviews Directly in the Source Editor
  - Full Crucible Review Lifecycle
  - Review Dashboard and Filters
  - Review Status Notifications

- **Bamboo Highlights in the Atlassian IDE Plugin 2.0 Beta**
  - Failed Tests in a Bamboo Build
  - Changed Files in a Bamboo Build
  - Bamboo Build Logs

- **Other Highlights in the Atlassian IDE Plugin 2.0 Beta**
  - Shared Project Configuration
  - Bug Fixes

- **Complete List of Fixes in this Release**

### Don't have the Atlassian IDE Plugin for IDEA yet?

Take a look at the features in the documentation. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

From time to time, the plugin development team posts some information on the plugin’s blog.

### Comments, Requests and Feedback

We would love your feedback. Please log your requests, bug reports and comments in our issue tracker.

### Upgrading from a Previous Version of the Atlassian Plugin

- If you are using the Crucible integration in Atlassian IDE Plugin for IDEA, please note that version 2.0 of the plugin requires Crucible 1.6 or later.
- Please refer to the plugin’s Upgrade Notes for further essential information about factors affecting your upgrade.
## Crucible Highlights in the Atlassian IDE Plugin 2.0 Beta

<table>
<thead>
<tr>
<th>1</th>
<th>Code Reviews Directly in the Source Editor</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Open the review and related source in the IDEA editor.</td>
</tr>
<tr>
<td></td>
<td>• View your colleagues' comments in the context of the source.</td>
</tr>
<tr>
<td></td>
<td>• Select the relevant lines and add your comment or reply to someone else's comment.</td>
</tr>
<tr>
<td></td>
<td>• Track comments via highlights and marks in the right-hand gutter.</td>
</tr>
<tr>
<td></td>
<td>• View the source diff to see what has changed.</td>
</tr>
<tr>
<td>2</td>
<td>Full Crucible Review Lifecycle</td>
</tr>
<tr>
<td>---</td>
<td>--------------------------------</td>
</tr>
<tr>
<td>• Create a post-commit review from a changelist in the IDEA's 'Repository Changes' window.</td>
<td></td>
</tr>
<tr>
<td>• Assign reviewers and notify them of the review.</td>
<td></td>
</tr>
<tr>
<td>• Approve, summarise and close your reviews and perform all other Crucible workflow actions.</td>
<td></td>
</tr>
<tr>
<td>• Complete the reviews assigned to you.</td>
<td></td>
</tr>
<tr>
<td>• Add a changelist to an existing review.</td>
<td></td>
</tr>
</tbody>
</table>
Review Dashboard and Filters

- The plugin now offers a dashboard-like display of reviews within IDEA.
- Select one or more standard Crucible filters.
- Define your own custom filter.
Expand and collapse the views to suit your needs.

Review Status Notifications

- You can now change the status of your Crucible reviews from within IDEA.
- The review notifications tell you not only that a review has been updated, but now also exactly what has happened to the review.
- Different colours and font markings show the review status. For example, blue indicates reviews which you need to review and green shows open reviews which you have created or moderated.
- Coloured squares indicate the number of reviewers and whether they have completed (green) or not completed (red) the review.
private final String displayName;
private final String actionName;

Action(String dName, String aName) {
    displayName = dName;
    actionName = aName;
}

    return displayName;
}

public String actionName() {
    return actionName;
}

public static Action fromValue(String value) {
    for (Action c : Action.values()) {
        if (c.actionName.equals(value))
            return c;
    }
    throw new IllegalArgumentException();
}

new Crucible action - deleteReview introduced
**Bamboo Highlights in the Atlassian IDE Plugin 2.0 Beta**

<table>
<thead>
<tr>
<th>5</th>
<th>Failed Tests in a Bamboo Build</th>
</tr>
</thead>
<tbody>
<tr>
<td>• View the tests which failed, in the 'Bamboo Failed Tests' window in IDEA.</td>
<td></td>
</tr>
<tr>
<td>• See the stack trace for each failed test.</td>
<td></td>
</tr>
<tr>
<td>• Click through from the stack trace directly to the code that failed, viewed in the IDEA editor.</td>
<td></td>
</tr>
</tbody>
</table>
Changed Files in a Bamboo Build

- Display a commit list in the 'Bamboo Build Changes' window in IDEA.
- View the changed files for each commit list.
- Open the changed files in the IDEA editor and view the diffs.
Bamboo Build Logs

- Show the full build log in IDEA's editor window.
Other Highlights in the Atlassian IDE Plugin 2.0 Beta

Shared Project Configuration

- The plugin now offers configuration at project level as well as IDE level. The screenshot below shows the project settings.
- Use the project settings to set up your team's Bamboo, JIRA and Crucible servers just once for each project.
- If you work on more than one project, this allows you to configure different servers for each project.
- In the IDE settings, each developer can configure their own workspace-specific settings, such as polling intervals and the behaviour of notification popups.
- Project settings can be stored in your source control repository, so that the plugin will load the settings at the same time as loading the project into IDEA.
• Settings which are specific to the developer (such as username, password, filters and layout options) are stored as private settings and should not be committed to the repository.

Bug Fixes

• We have fixed the problem which occurred when attempting to connect to a JIRA server with a self-signed SSL certificate.
• When multiple projects were open in separate windows, all pointing to the same JIRA server, only the last project opened would load the JIRA details. The others displayed as empty panels in the Atlassian plugin view. This is now fixed.
• And more...

Atlassian IDE Plugin 2.0 Beta for IDEA - Upgrade Notes

Below are some essential notes on upgrading to version 2.0 Beta of the Atlassian IDE Plugin for IDEA. For details of the new features and improvements in this release, please read the Release Notes.

On this page:

- Upgrade Notes
  - Crucible 1.6 Required
  - Upgrade Procedure

Upgrade Notes

Crucible 1.6 Required

Version 2.0 of the plugin supports Crucible 1.6 and later.

⚠️ The plugin no longer supports Crucible 1.5.

Explanation: The Crucible support in earlier versions of the plugin was very limited. Crucible 1.6 provides a more sophisticated API, allowing us to present the full review cycle within the IDE. As far as we know, very few people were making use of the Crucible 1.5 support in the plugin. For these reasons, it is not worthwhile continuing with Crucible 1.5 support.

When you upgrade to the latest version of the plugin, any Crucible servers not running Crucible 1.6 will not be accessible via the plugin.

Upgrade Procedure

Please take these steps to upgrade to version 2.0 Beta of the plugin:

- If you already have version 1.6.1 of the Atlassian IDE Plugin for IDEA, you can allow the automatic upgrade to version 2.0 Beta as usual. See the Upgrade Guide.
- If you do not have version 1.6.1 of the plugin, please use IDEA's plugin manager to upgrade the plugin:
  - In IDEA, Select File -> Settings -> IDE Settings -> Plugins.
  - Click the Available tab.
  - Select the Atlassian plugin and click the Update Plugin icon at top left.

Atlassian IDE Plugin 1.6.1 for IDEA - Release Notes

This page last changed on Jan 20, 2009 by smaddox.

26 August 2008

With pleasure, Atlassian presents version 1.6.1 of the Atlassian IDE Plugin for IDEA. This is a maintenance release, containing just two enhancements to smooth the upgrade to version 2 of the plugin, coming soon.

- The plugin's upgrade prompt now includes a link to the release notes. (The upgrade prompt is the popup window which invites you to install the latest version of the plugin.)
- The upgrade now allows a different version-numbering pattern, to allow for 'alpha' and 'beta' releases.

⚠️ Please make sure that you upgrade to version 1.6.1, to ensure a clean upgrade to version 2 in the near future.

Atlassian IDE Plugin 1.6 for IDEA - Release Notes

10 July 2008

With pleasure, Atlassian presents version 1.6 of the Atlassian IDE Plugin for IDEA. In this release, we have improved the functionality for JIRA issues displayed in the IDEA editor pane. You'll notice a JIRA icon on the tab next to the issue number. A few new controls allow you to expand and collapse sections of the pane. The items in the 'Details' section are now hyperlinked, so that you can click through to the relevant JIRA screen. A new toolbar provides buttons to open the issue for viewing or editing in your browser, or to analyse a stack trace.

The plugin now warns you when a server's SSL certificate is invalid, and gives you the choice of accepting or refusing the connection to the server. Below is a list of all the fixes and improvements in this release.

The Atlassian IDE Plugin is available for Eclipse too

Take a look at the release notes for the Eclipse version of the plugin.

With pleasure, Atlassian presents version 1.5 of the Atlassian IDE Plugin for IDEA. This release includes a number of bug fixes plus some nice new features:

- You can now open a JIRA issue in the IDEA editor pane.
- In the editor pane, click a link to open a stack trace.
- The clickable stack traces open in IDEA's output tool window, showing a tab for each JIRA issue.
- The editor pane also displays the issue's comments and allows you to add a new comment.
- When logging work against a JIRA issue, you can choose to adjust the time remaining manually, allow JIRA to adjust the time automatically based on your work logged, or leave the estimate as it was before you logged the work.
- You can now configure the plugin to use IDEA's proxy settings or to bypass IDEA's proxy settings altogether.

The Atlassian IDE Plugin is available for Eclipse too.

Take a look at the release notes for the Eclipse version of the plugin.

Atlassian IDE Plugin 1.4 Release Notes

This page last changed on Jan 20, 2009 by smaddox.

6 June 2008

With pleasure, Atlassian presents the Atlassian IDE Plugin version 1.4.

New! The plugin in Eclipse.

This release brings the first phase of our support for Eclipse, with the following features:

- Install and configure the plugin in Eclipse.
- View your build information via the plugin's Bamboo tab.

More features for the plugin in IDEA

There are some good fixes and improvements for the IDEA version of the plugin. Here are the highlights:

- The Crucible reviews are grouped according to Crucible Dashboard filters, making it easier for you to see the status of each review.
- The context menu for JIRA issues includes workflow actions. For example, you can now start progress, stop progress, etc. For simple actions, just click the menu option to complete the action. If the action needs more information, it will open in a browser window.
- When logging time against a JIRA issue, you can optionally stop progress.

Don't have the Atlassian IDE Plugin yet?

Take a look at the new features and other highlights in the Plugin 1.0 Release Notes. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

Atlassian IDE Plugin 1.3.1 Release Notes

This page last changed on Jan 20, 2009 by smaddox.

27 May 2008

Atlassian is delighted to present the Atlassian IDE Plugin version 1.3.1. This is mostly a bug-fix release.

The new feature of this release is:

• The Log Work window now allows you to enter an end date. The plugin will calculate start date based on the worklog entries

Below is a complete list of the fixes and enhancements in this release.

Atlassian IDE Plugin 1.3 Release Notes

26 May 2008

Atlassian is delighted to present the Atlassian IDE Plugin version 1.3. Highlights of this release include:

- When creating a JIRA issue, you can now assign it to anyone. When dealing with an existing issue, you can assign it to yourself or someone else.
- If a JIRA or Bamboo server is not available, the plugin will display an indication on the JIRA or Bamboo tab.

Below is a complete list of the fixes and enhancements in this release.

Don't have the Atlassian IDE Plugin yet? Take a look at the new features and other highlights in the Plugin 1.0 Release Notes. Then follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

Atlassian IDE Plugin 1.2 Release Notes

9 May 2008
Atlassian is delighted to present the Atlassian IDE Plugin version 1.2. Highlights of this release include:

- Support for HTTP proxies when configuring your server connections.
- Ability to log time on a JIRA issue within IDEA.
- Mouse-over tooltips for JIRA issues, showing detailed content of the JIRA ticket.

Developers will be interested to know that the plugin now communicates with JIRA via SOAP rather than XML-RPC. We needed SOAP to enable the JIRA time-logging feature mentioned above, so we have decided to move away from XML-RPC altogether.

Below is a complete list of the fixes and enhancements in this release.

Don't have the Atlassian IDE Plugin yet? Take a look at the new features and other highlights in the Plugin 1.0 Release Notes. Then follow our easy installation instructions.

Atlassian IDE Plugin 1.1 Release Notes

This page last changed on Jan 20, 2009 by smaddox.

25 April 2008
Atlassian is delighted to present the Atlassian IDE Plugin version 1.1.1. This is principally a bug-fix release.

Below is a list of the fixes and enhancements in this release.

You may notice that we have skipped version 1.1.0. This is because it had a problem which we fixed immediately, so version 1.1.1 is the one you want.

Don't have the Atlassian IDE Plugin yet?
Take a look at the new features and other highlights in the Plugin 1.0 Release Notes. Then follow our easy installation instructions.

Atlassian IDE Plugin 1.0 Release Notes

This page last changed on Jan 20, 2009 by smaddox.

10 April 2008
Atlassian is delighted to present the Atlassian IDE Plugin. The plugin is an addon for your integrated development environment (IDE). It allows you to pull in and work with the Atlassian products within your IDE. Now you don't have to switch between websites, email messages and news feeds to see what's happening to your project and your code. Instead, you can see the relevant JIRA issues, Bamboo build information and Crucible reviews right there in your development environment.

We are releasing version 1.0 of the plugin as a work in progress. Let us know what you think of it! Log your praise, ideas, feature requests and other issues in our JIRA issue tracker.

At the moment, the Atlassian IDE Plugin is available for IDEA 7.0.2 and above. In the future we will develop plugins for other IDEs, such as Eclipse and Visual Studio.

Want it?
Follow our easy installation instructions.

This is an open source project. You can get the source code from our SVN repository.

Use these Atlassian products right there in your IDE

1 JIRA — because you've got issues

- Use JIRA integrated into your IDE.
- Connect to one or more JIRA servers.
- View all relevant JIRA feature requests, bug reports and other issues.
- Add a new issue or comment on an existing one.
- Create a changelist based on an issue, automatically adding the issue name as a comment when you commit the changes. (A changelist, or change set, is a collection of code changes committed at the same time.)
Bamboo — the Zen of continuous integration

- Monitor your builds while you work.
- Connect to one or more Bamboo servers.
- An icon in the IDE status bar glows green or red, showing the latest build status.
- When a build fails, a popup window warns you of the problem.
- View your Bamboo plans, add labels and comments, and re-run a build when necessary.

Crucible — peer code review made painless

- Monitor your code reviews within your IDE.
- Connect to one or more Crucible servers.
- An icon in the IDE status bar lets you know when a review needs your attention.
- A popup window appears whenever a new pending review is created.
- Kick off a review of the code you have just written.

Known Issues in This Release

We have an enthusiastic and dedicated group of testers and customers who jump in there, try out the new Atlassian IDE Plugin release, and report any problems so that we can fix them quickly. Here’s a list of known issues.

A big thank you to everyone who provides feedback. Please keep logging issues and voting for them. And we’ll keep plugging away at improving the plugin!
Configuring the IntelliJ Connector

This page tells you how to configure your Atlassian IntelliJ Connector within IntelliJ IDEA. Before following the steps below, please make sure that you have installed the connector, as described in the Installation Guide.

The connector configuration panels display the version number and the SVN repository version of the Atlassian IntelliJ Connector that you are currently using.

The Atlassian IntelliJ Connector stores configuration settings at two levels in IntelliJ IDEA:

- Server connections are stored as project settings in IntelliJ IDEA. Project settings allow you to share the same server connections with other members of your project team. Additionally, if you work on more than one project, this allows you to configure different servers for each project. Project-level settings can be stored in your source control repository, so that the connector will load the settings at the same time as loading the project into IDEA.
- Other options are stored as IDE settings in IntelliJ IDEA. IDE settings allow each developer to configure their own workspace-specific settings, such as polling intervals and the behaviour of notification popups.

Configuring Servers and Display Options

Configuring your JIRA Server Connections

To configure your JIRA server connection(s):

1. Go to the 'Project Settings' for the 'Atlassian Connector', by doing one of the following:
   - Open the IDEA 'Settings' dialogue, then go to the 'Project Settings' section and click the 'Atlassian Connector' icon.
   - Or you can click the configuration icon on your connector window.
2. Go to the 'Servers' tab.

To add a JIRA server:

1. Click the plus icon on the configuration panel.
2. A list of server types will appear. Select 'Add JIRA Server'.
3. A form will appear. Enter the information as follows:
   - 'Server Enabled' — Leave this checkbox ticked (default). If necessary, you can remove the tick to disable particular servers without deleting them. This is useful if your servers are behind a firewall and you don't have access to them.
   - 'Server Name' — A description of your JIRA server.
   - 'Server URL' — The address of your JIRA server.
• 'Username' and 'Password' — The login name and password you use to access the JIRA server.
• Remember Password — Put a tick in the checkbox if you want to save your password on disk. Leave the checkbox unticked if you want to be asked for a password every time you start your IDE.

If you choose to remember the password, it is stored in a Base64 encoding, so it is not really secure.

4. Click the 'Test Connection' button to check that the connection to the server works.
5. Click 'Apply' to save your changes and continue with server configuration, or 'OK' to save your changes and close the configuration tab.
6. Click the 'Defaults' tab to set your default server (if you have defined more than one JIRA server) and default project.
7. Now you can configure the JIRA options, as described below.

You can add more than one JIRA server.

Configuring your JIRA Options

1. Open the IDEA 'Settings' dialogue, then go to the 'IDE Settings' section and click the 'Atlassian Connector' icon.
2. Define the maximum number of issues that the connector will show on each screen. At display time, if there are more issues than specified here, the connector will display a 'Get More Issues...' link allowing you to retrieve the next batch of issues from the server.

Screenshot: Configuring JIRA server connections
Configuring your Bamboo Server Connections

To configure your Bamboo server connection(s):

1. Go to the 'Project Settings' for the 'Atlassian Connector', by doing one of the following:
   - Open the IDEA 'Settings' dialogue, then go to the 'Project Settings' section and click the 'Atlassian Connector' icon.
   - Or you can click the configuration icon on your connector window.
2. Go to the 'Servers' tab.

To add a Bamboo server:

1. Click the plus icon on the configuration panel.
2. A list of server types will appear. Select 'Add Bamboo Server'.
3. A form will appear. Enter the information as follows:
   - 'Server Enabled' — Leave this checkbox ticked (default). If necessary, you can remove the tick to disable particular servers without deleting them. This is useful if your servers are behind a firewall and you don't have access to them.
   - 'Server Name' — A description of your Bamboo server.
   - 'Server URL' — The address of your Bamboo server.
   - 'Username' and 'Password' — The login name and password you use to access the Bamboo server.
   - Remember Password — Put a tick in the checkbox if you want to save your password on disk. Leave the checkbox unticked if you want to be asked for a password every time you start your IDE.
     - If you choose to remember the password, it is stored in a Base64 encoding, so it is not really secure.
4. Click the 'Test Connection' button to check that the connection to the server works. A list of build plans will appear.
5. If your Bamboo build server is located in a different time zone than you, you can manually adjust the 'Time Zone Difference'. You should specify a positive difference if your time is ahead of your build server (e.g. you are in Russia and the build server is in the UK). You should specify a negative difference if your time is behind your build server (e.g. you are in the US and your build server is in Spain).
6. Now select the Build Plans that the connector will watch. You can either select plans manually from the list of plans defined on the Bamboo server, or simply use your favourite plans as defined on the server. Your favourite plans are marked with a yellow star 🌟.
7. Click 'Apply' to save your changes and continue with server configuration, or 'OK' to save your changes and close the configuration tab.
8. Now you can configure the Bamboo options, as described below.

You can add more than one Bamboo server.
Configuring your Bamboo Options

1. Open the IDEA 'Settings' dialogue, then go to the 'IDE Settings' section and click the 'Atlassian Connector' icon.
2. Define the behaviour of the popup window that is shown when the status of the build changes. (See Working with Bamboo Builds in IDEA.)
3. Set the polling interval that the connector will use to monitor build plans on all defined Bamboo servers. Specify the value in minutes.

Configuring your Crucible Server Connections

To configure your Crucible server connection(s):

1. Go to the 'Project Settings' for the 'Atlassian Connector', by doing one of the following:
   • Open the IDEA 'Settings' dialogue, then go to the 'Project Settings' section and click the 'Atlassian Connector' icon.
   • Or you can click the configuration icon on your connector window.
2. Go to the 'Servers' tab.
   
To add a Crucible server:

1. Click the plus icon on the configuration panel.
2. A list of server types will appear. Select 'Add Crucible Server'.
3. A form will appear. Enter the information as follows:
   • 'Server Enabled' — Leave this checkbox ticked (default). If necessary, you can remove the tick to disable particular servers without deleting them. This is useful if your servers are behind a firewall and you don't have access to them.
   • 'Server Name' — A description of your Crucible server.
   • 'Server URL' — The address of your Crucible server.
   • 'Username' and 'Password' — The login name and password you use to access the Crucible server.
   • Remember Password — Put a tick in the checkbox if you want to save your password on disk. Leave the checkbox unticked if you want to be asked for a password every time you start your IDE.
     If you choose to remember the password, it is stored in a Base64 encoding, so it is not really secure.
4. Click the 'Test Connection' button to check that the connection to the server works.
5. If your Crucible server is linked to a FishEye server, put a tick in the checkbox labelled 'Crucible Server Contains FishEye Instance'. Remember to set up your FishEye defaults, as described in Configuring your FishEye Options in IDEA.
   Don't worry if you do not have a FishEye server. There is very little effect on the connector's functionality. The only thing you will not be able to do, is to access a FishEye diff view of the source code under review.
6. Click 'Apply' to save your changes and continue with server configuration.
7. Click the 'Defaults tab to set up a default Crucible server, project and repository. These defaults will be used when you create a review directly from your source within IDEA.
8. Now you can configure the Crucible options, as described below.

You can add more than one Crucible server.

Configuring your Crucible Options

1. Open the IDEA 'Settings' dialogue, then go to the 'IDE Settings' section and click the 'Atlassian Connector' icon.
2. Define the behaviour of the popup window that is shown when someone adds a Crucible review that affects you. (See Working with Crucible Reviews in IDEA.)
3. Set the polling interval that the connector will use to monitor all defined Crucible servers. Specify the value in minutes.
Configuring FishEye and Crucible Connections on Same Server

If you have FishEye and Crucible running on the same server, then you can use your Crucible server configuration for the connector's FishEye functionality too:

1. Simply put a tick in the checkbox labelled 'Crucible Server Contains FishEye Instance' on the Crucible server configuration screen.
2. Then set up your FishEye defaults, as described below.

Crucible server configuration is described in full in Configuring your Crucible Options in IDEA.

You can add more than one Crucible and/or FishEye server.

Configuring a Separate FishEye Server Connection

To configure a FishEye server connection independently of Crucible:

1. Go to the 'Project Settings' for the 'Atlassian Connector', by doing one of the following:
   - Open the IDEA 'Settings' dialogue, then go to the 'Project Settings' section and click the 'Atlassian Connector' icon.
   - Or you can click the configuration icon on your connector window.
2. Go to the 'Servers' tab.
3. Click the plus icon on the configuration panel.
4. A list of server types will appear. Select 'Add FishEye Server'.
5. A form will appear. Enter the information as follows:
   - 'Server Enabled' — Leave this checkbox ticked (default). If necessary, you can remove the tick to disable particular servers without deleting them. This is useful if your servers are behind a firewall and you don't have access to them.
   - 'Server Name' — A description of your FishEye server.
   - 'Server URL' — The address of your FishEye server.
   - 'Username' and 'Password' — The login name and password you use to access the FishEye server.
   - Remember Password — Put a tick in the checkbox if you want to save your password on disk. Leave the checkbox unticked if you want to be asked for a password every time you start your IDE.
   - If you choose to remember the password, it is stored in a Base64 encoding, so it is not really secure.
6. Click the 'Test Connection' button to check that the connection to the server works.
7. Click 'Apply' to save your changes and continue with server configuration.
8. Click the 'Defaults' tab and set up your FishEye defaults. It is important to configure your FishEye defaults correctly. These values will be used to construct the path when you attempt to open a source file from IDEA in FishEye's web interface. See Working with your FishEye Repository View in IDEA. Set the default values as follows:
   - 'Server' — Select one of your FishEye connections.
   - 'Repository' — Select the repository where your source files reside. These are the source files you will be working on most often in IDEA.
   - 'Path to Project' — Enter the path to the root of the project in your repository. For example, the path may be one of the following:
     - blank, if your project is at the root of the repository.
     - trunk/
     - trunk/myproject

Example of Default Repository and Path

Let's assume:

- Your FishEye instance is located at:

  [http://example.com/fisheye](http://example.com/fisheye)
• You have a repository called my_project.
• You are working under the trunk directory under this project.

Your settings will be:

<table>
<thead>
<tr>
<th>Default Repository</th>
<th>my_project</th>
</tr>
</thead>
<tbody>
<tr>
<td>Path to Project</td>
<td>trunk/</td>
</tr>
</tbody>
</table>

Removing a Server Connection

To remove a server from the list:

1. Select the server.
2. Click the minus icon on the configuration panel.

Configuring General Options

Screenshot: General tab of the connector IDE Settings panel

The 'General' tab is used to define the upgrade options for your connector, configure an HTTP proxy and set other options as described below.

Automatic Upgrade

The connector's auto-upgrade feature, if enabled, will prompt you to install the most recent version of the connector when available.

To configure the connector's auto-upgrade feature:

1. Put a tick in the 'Enabled (stable version)' checkbox to enable the connector auto-upgrade feature. The connector will check for the latest available stable (released) version of the connector.
2. Put a tick in the 'Check snapshot versions' checkbox if the auto-upgrade should include unstable (development) versions of the connector as well as stable versions.

Manual Upgrade

To check immediately for the latest version of the connector:
1. Select one of the radio buttons as follows:
   • Stable only — The connector will check for the latest available stable (released) version of the
     connector.
   • Stable + snapshot — The connector will check for the latest version, including unstable
     (development) versions of the connector as well as stable versions.
2. Click the 'Check now' button.

For more details, refer to Upgrading the IntelliJ Connector.

HTTP Proxy

You can configure the connector to use IDEA's proxy settings or to bypass IDEA's proxy settings
altogether. If the connector is using IDEA's proxy settings, you can configure the settings here too.

To use IDEA's proxy settings:

1. Select the 'Use IDEA proxy settings' radio button.
2. Click the 'Edit IDEA proxy settings' button. A dialogue will appear, similar to this screenshot:

   ![Proxy Configuration Dialogue]

3. Enter the required settings and click the 'OK' button. If your proxy requires a domain name in
   addition to username, enter the information in the format \texttt{domain\user}.
4. Restart IDEA for your changes to take effect.

Collection of Statistics

Put a tick in the 'Report anonymous usage statistics' checkbox if you are happy for us to collect
information on the connector usage. If you agree to take part, the connector will send Atlassian the
unique ID generated by the connector on its first installation. No other information is collected.

This feature is disabled by default. When you first open the connector configuration panel, we also ask
you to decide whether you agree to participate in the statistics collection.

Reporting Bugs and Requesting New Features

Click the following links on the Project Settings or IDE Settings panel:

• Report Bug — This will open a bug-creation page in the connector's JIRA issue tracker. It will
  automatically populate the connector version number and details of the environment (Java version
  and vendor, OS details, build number of your IDE).
• Request Feature — This will open an issue-creation page of the 'Story' type in the connector's JIRA issue tracker. Use this issue type to request new connector functionality.

**Getting Help**

Click the 'Help' link on the Project Settings or IDE Settings panel. This will open the online documentation page which tells you how to configure the connector — namely, this page. From here, you can click the links to view other online documentation pages.

If you're looking for support or other help, please take a look at the links on our documentation home page.

Before reading the information below, please make sure that you have installed the Atlassian IntelliJ Connector, as described in the Installation Guide.

The Atlassian IntelliJ Connector stores configuration settings at two levels in IntelliJ IDEA:

- Server connections are stored as project settings in IntelliJ IDEA. Project settings allow you to share the same server connections with other members of your project team. Additionally, if you work on more than one project, this allows you to configure different servers for each project. Project-level settings can be stored in your source control repository, so that the connector will load the settings at the same time as loading the project into IDEA.
- Other options are stored as IDE settings in IntelliJ IDEA. IDE settings allow each developer to configure their own workspace-specific settings, such as polling intervals and the behaviour of notification popups.

On this page:

- Configuring your Bamboo Server Connections
- Configuring your Bamboo Options

Configuring your Bamboo Server Connections

To configure your Bamboo server connection(s):

1. Go to the 'Project Settings' for the 'Atlassian Connector', by doing one of the following:
   - Open the IDEA 'Settings' dialogue, then go to the 'Project Settings' section and click the 'Atlassian Connector' icon.
   - Or you can click the configuration icon on your connector window.
2. Go to the 'Servers' tab.

To add a Bamboo server:

1. Click the plus icon on the configuration panel.
2. A list of server types will appear. Select 'Add Bamboo Server'.
3. A form will appear. Enter the information as follows:
   - 'Server Enabled' — Leave this checkbox ticked (default). If necessary, you can remove the tick to disable particular servers without deleting them. This is useful if your servers are behind a firewall and you don't have access to them.
   - 'Server Name' — A description of your Bamboo server.
   - 'Server URL' — The address of your Bamboo server.
   - 'Username' and 'Password' — The login name and password you use to access the Bamboo server.
   - Remember Password — Put a tick in the checkbox if you want to save your password on disk. Leave the checkbox unticked if you want to be asked for a password every time you start your IDE.
     ❗️ If you choose to remember the password, it is stored in a Base64 encoding, so it is not really secure.
4. Click the 'Test Connection' button to check that the connection to the server works. A list of build plans will appear.
5. If your Bamboo build server is located in a different time zone than you, you can manually adjust the 'Time Zone Difference'. You should specify a positive difference if your time is ahead of your build server (e.g. you are in Russia and the build server is in the UK). You should specify a negative difference if your time is behind your build server (e.g. you are in the US and your build server is in Spain).
6. Now select the Build Plans that the connector will watch. You can either select plans manually from the list of plans defined on the Bamboo server, or simply use your favourite plans as defined on the server. Your favourite plans are marked with a yellow star 🌟.
7. Click 'Apply' to save your changes and continue with server configuration, or 'OK' to save your changes and close the configuration tab.
8. Now you can configure the Bamboo options, as described below.

❗️ You can add more than one Bamboo server.
Configuring your Bamboo Options

1. Open the IDEA 'Settings' dialogue, then go to the 'IDE Settings' section and click the 'Atlassian Connector' icon.
2. Define the behaviour of the popup window that is shown when the status of the build changes. (See Working with Bamboo Builds in IDEA.)
3. Set the polling interval that the connector will use to monitor build plans on all defined Bamboo servers. Specify the value in minutes.

Working with Bamboo Builds in IDEA

This page last changed on Feb 09, 2009 by smaddox.

The Atlassian IntelliJ Connector lets you monitor and act upon your Bamboo builds from within IntelliJ IDEA.

Prerequisites

Please make sure that you have installed the Atlassian IntelliJ Connector, as described in the Installation Guide, and defined at least one Bamboo server, as described in the Configuration Guide.

Summary of What You Can Do

Below are the highlights of the functionality supplied by the IntelliJ Connector for viewing and acting upon Bamboo build information within IDEA. In the list below, each item is linked to the relevant section on this page. Please read the rest of the page for a full reference guide.

• Receive notifications of failed builds
• Re-run a build
• Open the Bamboo build details in an IDEA output tool window
• View a Bamboo build log
• View failed tests and stack traces
• Click a link in a stack trace to go directly to the code that failed
• Re-run a failed test
• View changed files
• Compare the build version of a file with your local version
• Compare the build version of a file with the previous repository version
• Open the repository version of a file in your IDEA editor
• Comment on a Bamboo build
• Label a Bamboo build

Sections on this page:

• Prerequisites
• Summary of What You Can Do
• Watching the Bamboo Status Icon and Popup
• Accessing the Bamboo Builds Tab in IDEA
• Using the Bamboo Builds Tab
• Viewing and Acting Upon Builds

Watching the Bamboo Status Icon and Popup

After you have defined the Bamboo servers and builds to monitor, the Bamboo icon in the status bar shows the summary status of your builds. If at least one build is currently failing, the icon is red, otherwise it is green.

Screenshot: Bamboo status icon in the IDEA status bar

The screenshot above shows a red Bamboo status icon in the status bar, with the tooltip 'Some builds failed. Click to see details.'

If the Bamboo tab is not already open, you can click the status icon to open the Bamboo tab in the connector window, where detailed information is shown. See below.

In addition, when the summary status changes (e.g. a build fails), a popup window appears to warn you of the problem. You can configure the behaviour of the popup, as described in the Configuration Guide.

Screenshot: Bamboo build notification
Accessing the Bamboo Builds Tab in IDEA

To open the connector's Bamboo tab in IDEA, you can do one of the following:

- Click the Bamboo status icon in the IDEA status bar. The icon may be red or green.
- Or click the Atlassian Connector control button at the bottom of the IDEA screen:

```
[Image]
```

Then select the Bamboo tab in the connector window toolbar:

```
[Image]
```

Using the Bamboo Builds Tab

The Bamboo builds tab shows information about all builds on all servers defined in the connector configuration panel. You can filter your builds by server, project or state and then group them by server, project, state or date.

💡 The set of information is different for Bamboo 1.x and Bamboo 2.x servers. Bamboo 2.x servers can return more detailed information than Bamboo 1.x.

Screenshot: The Bamboo builds tab in the connector window
Using the Toolbar

The tool bar in the Bamboo builds tab provides the following functionality:

<table>
<thead>
<tr>
<th>Filter By</th>
<th>Group By</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Project</strong></td>
<td><strong>Project</strong></td>
</tr>
</tbody>
</table>

Define the method of filtering your build display, as shown in the left-hand column of the Bamboo builds tab. You can choose:

- **None** — Display a flat list of builds, without any filtering. The left-hand column of the Bamboo builds tab will disappear, so that you see only the list of builds.
- **Server** — Filter the builds per Bamboo server.
- **Project** — Filter the builds by project.
- **State** — Filter the builds by build status.

Divide the list of Bamboo builds into groups. You can choose:

- **None** — Display a flat list of builds, in no particular order.
- **State** — Display the issues per build status. For example, this would group all successful builds under one heading and all failed builds under another heading.
- **Project** — Display the builds per project.
- **Server** — Display the builds per server, if you have selected more than one Bamboo server.
- **Date** — Group the builds depending on the date last run. The connector groups
Open all the build groups, so that you can see the list of builds under every heading.

Close all the build lists for all groups, so that you can see only the group headings.

Open the selected build in an IDEA output tool window. See below.

Open the selected build in your browser, using the Bamboo user interface.

Re-run the selected build.

Label a build.

Add a comment to a build.

Get help on the usage of the Bamboo build tab, i.e. open this documentation page in your browser.

The search box gives you quick access to a build. Just type the build number into the search box at top right of the Issues tab. The connector will display matching builds as you type.

Using the Context Menu for a Build

You can perform the following functions for each line in the list:

- Double-click a line to open the selected build in an IDEA output tool window. See below.
- Right-click a line to show a popup context menu (also shown in the screenshot above) with actions that can be performed for a Bamboo build. The available actions depend on the version of Bamboo running on your server.
  - Open Build — Open the selected build in an IDEA output tool window. See below.
  - View in Browser — Open the selected build in your browser, using the Bamboo user interface.
  - Run Build — Re-run the last build of the selected plan.
  - Add Label to Build — Label a build.
  - Add Comment to Build — Add a comment to a build.

Viewing and Acting Upon Builds

From the Bamboo builds tab, described above, you can open a Bamboo build in an IDEA output tool window. For example, you can do one of the following:

- Select the build and then click the 'Open Build' icon 📊, or
- Right-click the build line and then select 'Open Build' from the popup context menu.
The build will open in an IDEA output tool window. The window will have a number of tabs, displaying information related to the build.

**Viewing Build Details**

**Screenshot: Bamboo build window, showing the build details**

<table>
<thead>
<tr>
<th>Details</th>
<th>Changes</th>
<th>Tests</th>
<th>Build Log</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>Changes</td>
<td>Tests</td>
<td>Build Log</td>
</tr>
<tr>
<td>Last Build</td>
<td>127</td>
<td></td>
<td></td>
</tr>
<tr>
<td>When</td>
<td>1 day ago</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Build Reason</td>
<td>Scheduled build</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Tests</td>
<td>1/1 failed</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The tool bar provides the following functionality:

- ![Open](icon)
  - Open the selected build in your browser, using the Bamboo user interface.
- ![Re-run](icon)
  - Re-run the last build of the selected build.
- ![Label](icon)
  - Label a build.
- ![Comment](icon)
  - Add a comment to a build.
- ![Close](icon)
  - Close the build window in IDEA.

**Viewing Build Changes**

The 'Changes' tab displays a commit list and the changed files. To access this tab:

1. Go to the Bamboo builds tab in the connector window, described above.
2. Select a build and then click the 'Open Build' icon. The build will open in an IDEA output tool window.
3. Click the 'Changes' tab.

**Screenshot: Bamboo build window, showing the changes in the build**
You can select a toolbar option or right-click on a file to perform the following actions:

- **Open the changed file in your IDEA editor.**
- **Open a window showing two versions of the changed file (the version in the selected Bamboo build and your local copy) side by side, highlighting the differences between the two versions.**
- **Open a window showing two versions of the changed file (the version in the selected Bamboo build and the version just before that) side by side, highlighting the differences between the two versions.**
- **Retrieve the latest version of the file from your source repository and open it in your IDEA editor.**
- **Remove the folder tree from the display and show a simple list of changed files.**
- **Display the tree of folders in which the changed files reside.**
- **If you are showing the folder tree, select this option to open all the folders, so that you can see the list of files under every heading.**
- **If you are showing the folder tree, select this option to close all the file lists, so that you can see only the folder names.**
Viewing Failed Tests

The 'Tests' tab displays a list of the tests which have failed in the selected build. To access this tab:

1. Go to the Bamboo builds tab in the connector window, described above.
2. Select a build and then click the 'Open Build' icon. The build will open in an IDEA output tool window.
3. Click the 'Tests' tab.

Screenshot: Bamboo build window, showing the failed tests in the build

You can perform the following actions:

- Select a test in the left-hand pane to see a stack trace in the right-hand pane.
- Click a hyperlinked file in the stack trace to open the source file in your IDEA editor.
- Right-click a test or a group of tests in the left-hand pane to see a popup context menu, allowing you to:
  ° Re-run the tests.
  ° Debug the tests.
  ° Open the source file in your IDEA editor.

Viewing the Build Log

The 'Build Log' tab displays a full build log for the selected build. To access this tab:

1. Go to the Bamboo builds tab in the connector window, described above.
2. Select a build and then click the 'Open Build' icon. The build will open in an IDEA output tool window.
3. Click the 'Build Log' tab.

Screenshot: Bamboo build window, showing the build log
You can click a hyperlinked file in the log to open the file in your IDEA editor.

Configuring your Crucible Options in IDEA

This page last changed on Feb 05, 2009 by smaddox.

Before reading the information below, please make sure that you have installed the Atlassian IntelliJ Connector, as described in the Installation Guide.

The Atlassian IntelliJ Connector stores configuration settings at two levels in IntelliJ IDEA:

- Server connections are stored as project settings in IntelliJ IDEA. Project settings allow you to share the same server connections with other members of your project team. Additionally, if you work on more than one project, this allows you to configure different servers for each project. Project-level settings can be stored in your source control repository, so that the connector will load the settings at the same time as loading the project into IDEA.
- Other options are stored as IDE settings in IntelliJ IDEA. IDE settings allow each developer to configure their own workspace-specific settings, such as polling intervals and the behaviour of notification popups.

On this page:

- Configuring your Crucible Server Connections
- Configuring your Crucible Options

Configuring your Crucible Server Connections

To configure your Crucible server connection(s):

1. Go to the ‘Project Settings’ for the ‘Atlassian Connector’, by doing one of the following:
   - Open the IDEA ‘Settings’ dialogue, then go to the ‘Project Settings’ section and click the ‘Atlassian Connector’ icon.
   - Or you can click the configuration icon on your connector window.
2. Go to the ‘Servers’ tab.
   - Click the plus icon on the configuration panel.
   - A list of server types will appear. Select ‘Add Crucible Server’.
   - A form will appear. Enter the information as follows:
     - ‘Server Enabled’ — Leave this checkbox ticked (default). If necessary, you can remove the tick to disable particular servers without deleting them. This is useful if your servers are behind a firewall and you don’t have access to them.
     - ‘Server Name’ — A description of your Crucible server.
     - ‘Server URL’ — The address of your Crucible server.
     - ‘Username’ and ‘Password’ — The login name and password you use to access the Crucible server.
     - Remember Password — Put a tick in the checkbox if you want to save your password on disk. Leave the checkbox unticked if you want to be asked for a password every time you start your IDE.
   - If you choose to remember the password, it is stored in a Base64 encoding, so it is not really secure.
3. Click the ‘Test Connection’ button to check that the connection to the server works.
4. If your Crucible server is linked to a FishEye server, put a tick in the checkbox labelled ‘Crucible Server Contains FishEye Instance’. Remember to set up your FishEye defaults, as described in Configuring your FishEye Options in IDEA.
   - Don’t worry if you do not have a FishEye server. There is very little effect on the connector’s functionality. The only think you will not be able to do, is to access a FishEye diff view of the source code under review.
5. Click ‘Apply’ to save your changes and continue with server configuration.
6. Click the ‘Defaults tab to set up a default Crucible server, project and repository. These defaults will be used when you create a review directly from your source within IDEA.
7. Now you can configure the Crucible options, as described below.

You can add more than one Crucible server.
Configuring your Crucible Options

1. Open the IDEA 'Settings' dialogue, then go to the 'IDE Settings' section and click the 'Atlassian Connector' icon.
2. Define the behaviour of the popup window that is shown when someone adds a Crucible review that affects you. (See Working with Crucible Reviews in IDEA.)
3. Set the polling interval that the connector will use to monitor all defined Crucible servers. Specify the value in minutes.

Working with Crucible Reviews in IDEA
Installation and Upgrade Guide for the IntelliJ Connector
Working with Crucible Reviews in IDEA

This page last changed on Feb 12, 2009 by smaddox.

The Atlassian IntelliJ Connector allows you to conduct Crucible reviews from within IntelliJ IDEA. You can complete the full review lifecycle within IDEA — create a review from your source code, make comments directly against the source code in your editor, view the comments, reply to comments and look at the diffs.

Prerequisites

Please make sure that you have installed the Atlassian IntelliJ Connector, as described in the Installation Guide, and defined at least one Crucible server, as described in the Configuration Guide.

Summary of What You Can Do

Below are the highlights of the functionality supplied by the IntelliJ Connector for conducting Crucible reviews within IDEA. In the list below, each item is linked to the relevant section on this page. Please read the rest of the page for a full reference guide.

- Receive notifications of new and updated reviews
- View your filtered reviews within IDEA
- View the review details and comments in an IDEA output tool window
- Create a review
- View the source code that is under review
- View the diff
- Add a review comment
- Add a review comment on a source code line
- Move to the commented code in the source view
- Add a changelist to an existing review
- Move a review through its workflow
- Complete a review

Hint: There's more — too many options to document exhaustively here. Click around and try it out 😊

Sections on this page:

- Prerequisites
- Summary of What You Can Do
- Watching the Crucible Status Icon and Popup
- Accessing the Crucible Reviews Tab in IDEA
- Using the Crucible Reviews Tab
- Viewing Review Details
- Working with Review Comments in the Output Tool Window
- Working with Review Comments in the IDEA Editor
- Creating a Review

Watching the Crucible Status Icon and Popup

After you have defined at least one Crucible server in the connector configuration panel, the Crucible status icon 🟢 is displayed in the status bar. The icon has the following states:

- Grey when there are no reviews awaiting your attention.
- Grey with a green tick ✔️ when there is at least one pending review which you have not yet accessed in the Crucible tab.

Screenshot: Crucible status icon in the IDEA status bar
Click the Crucible icon to open the Crucible reviews tab. The icon state will be reset to grey.

In addition to the icon, a popup window notifies you of status changes and comments added to the reviews which affect you.

**Screenshot: Crucible review notification**

### Accessing the Crucible Reviews Tab in IDEA

To open the connector's Crucible reviews tab, you can do one of the following:

- Click the Crucible status icon in the IDEA status bar.
- Or click the Atlassian Connector control button at the bottom of the IDEA screen:

```plaintext
   |   |   |
```

Then select the Crucible reviews tab in the connector window toolbar:

```plaintext
   |   |   |
```

### Using the Crucible Reviews Tab

The Crucible reviews tab shows the reviews matching your selected filters, such as 'To Review', 'Out For Review', etc. You can further group the reviews by server, state, author or project.

**Screenshot: Crucible tab in the connector window**
Filtering and Grouping the Issues Displayed

The left-hand pane shows all the reviews in which you are a participant, filtered via the standard Crucible filters (such as 'To Review', 'Out For Review', etc).

- You can select one or more standard Crucible filters in the left-hand pane. The matching reviews are shown in the right-hand pane. Press Ctrl to select more than one filter.
- To define your own custom filter, select 'Custom Filter' at the bottom of the left-hand pane then click the 'Edit' button.
- Choose the grouping of reviews from the 'Group By' dropdown list at the top of the window.
- Then expand and collapse the groups to suit your needs.

Using the Toolbar

The tool bar in the Crucible reviews tab provides the following functionality:

- Divide the list of Crucible reviews into groups. You can choose:
  - None — Display a flat list of reviews, in no particular order.
  - State — Display the reviews per review status. For example, this would group all draft reviews under one heading and all open ('Review' status) reviews under another heading.
  - Author — Group the reviews according to the person who initiated the review i.e. the author.
  - Project — Display the reviews per project.
  - Server — Display the reviews per server, if you have defined more than one Crucible server.

- Open the connector configuration panel, either the project settings or the IDE settings. See Configuring your Crucible Options in IDEA.
Using the Context Menu for a Review

You can perform the following functions for each line in the list of reviews:

- Double-click a line to open the selected build in an IDEA output tool window. See below.
- Right-click a line to show a popup context menu (pictured in the screenshot above) with actions that you can perform for the selected review:
  - Open Review — Open the selected Crucible review in an IDEA window. See below.
  - View Review in Browser — Open the selected review in your web browser, using the Crucible user interface.
  - Workflow actions, such as Summarize and Close Review and Abandon Review — Move the review through the Crucible workflow statuses. The actions shown here will differ, depending on the current state of the selected review.
  - Set Reviewers — Ask people to participate in the review.

Viewing Review Details

From the Crucible reviews tab, described above, you can open a Crucible review in an IDEA output tool window. For example, you can do one of the following:

- Select the review and then click the 'Open Review' icon 📋, or
- Right-click the review line and then select 'Open Review' from the popup context menu.

The review will open in an IDEA output tool window.

Screenshot: Crucible review window, showing the review details
A green tick next to a reviewer's name means that the reviewer has completed their part of the review.

The tool bar provides the following functionality:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🍃</td>
<td>Open the selected review in your browser, using the Crucible user interface.</td>
</tr>
<tr>
<td>🌐</td>
<td>Fetch the latest review details from your Crucible server.</td>
</tr>
<tr>
<td>📜</td>
<td>A popup window will appear, allowing you to enter a comment summarising the review and then close the review.</td>
</tr>
<tr>
<td>📈</td>
<td>A popup window will appear, showing the review summary information and allowing you to confirm that you want to abandon the review.</td>
</tr>
<tr>
<td>🐦</td>
<td>Choose the people you want to participate in the review.</td>
</tr>
<tr>
<td>✗</td>
<td>Close the review window in IDEA.</td>
</tr>
</tbody>
</table>

### Working with Review Comments in the Output Tool Window

In this section, we discuss the review comments as displayed in an IDEA output tool window. In a later section, you will see how to view and add comments in the IDEA editor.

From the Crucible reviews tab, described above, you can open a Crucible review in an IDEA output tool window:

- Select the review and then click the 'Open Review' icon 🍃, or right-click the review line and then select 'Open Review' from the popup context menu.
- Click the 'Comments' tab.

The review comments will open in an IDEA output tool window.

**Screenshot: Crucible review window, showing the review comments**
The above screenshot shows:

- A general comment at the top of the review tree.
- A popup context menu that appears when you right-click a file name, allowing you to add a general comment or a revision comment on the selected file.

From the Comments tab, you can do the following:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Folder" /></td>
<td>View your local version of the source code that is under review, by opening it in the IDEA editor.</td>
</tr>
<tr>
<td><img src="image" alt="Folder" /></td>
<td>Retrieve the version of the source code that is under review, by getting it from the source repository and then opening it in the IDEA editor.</td>
</tr>
<tr>
<td><img src="image" alt="Document" /></td>
<td>Compare the version of the file under review with the previous version in the repository, to see the changes that are under review.</td>
</tr>
<tr>
<td><img src="image" alt="Comment" /></td>
<td>Add a new review comment.</td>
</tr>
<tr>
<td><img src="image" alt="Comment" /></td>
<td>Edit an existing review comment.</td>
</tr>
<tr>
<td><img src="image" alt="Comment" /></td>
<td>Delete an existing review comment.</td>
</tr>
</tbody>
</table>

Hint: There's more — too many options to document exhaustively here. Click around and try it out 😊

Installation and Upgrade Guide for the IntelliJ Connector
Configuring your FishEye Options in IDEA

This page last changed on Feb 12, 2009 by smaddox.

Before reading the information below, please make sure that you have installed the Atlassian IntelliJ Connector, as described in the Installation Guide.

The Atlassian IntelliJ Connector stores configuration settings at two levels in IntelliJ IDEA:

- Server connections are stored as project settings in IntelliJ IDEA. Project settings allow you to share the same server connections with other members of your project team. Additionally, if you work on more than one project, this allows you to configure different servers for each project. Project-level settings can be stored in your source control repository, so that the connector will load the settings at the same time as loading the project into IDEA.
- Other options are stored as IDE settings in IntelliJ IDEA. IDE settings allow each developer to configure their own workspace-specific settings, such as polling intervals and the behaviour of notification popups.

On this page:
- Configuring FishEye and Crucible Connections on Same Server
- Configuring a Separate FishEye Server Connection

Configuring FishEye and Crucible Connections on Same Server

If you have FishEye and Crucible running on the same server, then you can use your Crucible server configuration for the connector's FishEye functionality too:

1. Simply put a tick in the checkbox labelled 'Crucible Server Contains FishEye Instance' on the Crucible server configuration screen.
2. Then set up your FishEye defaults, as described below.

Crucible server configuration is described in full in Configuring your Crucible Options in IDEA.

You can add more than one Crucible and/or FishEye server.

Configuring a Separate FishEye Server Connection

To configure a FishEye server connection independently of Crucible:

1. Go to the 'Project Settings' for the 'Atlassian Connector', by doing one of the following:
   - Open the IDEA 'Settings' dialogue, then go to the 'Project Settings' section and click the 'Atlassian Connector' icon.
   - Or you can click the configuration icon on your connector window.
2. Go to the 'Servers' tab.
3. Click the plus icon on the configuration panel.
4. A list of server types will appear. Select 'Add FishEye Server'.
5. A form will appear. Enter the information as follows:
   - 'Server Enabled' — Leave this checkbox ticked (default). If necessary, you can remove the tick to disable particular servers without deleting them. This is useful if your servers are behind a firewall and you don't have access to them.
   - 'Server Name' — A description of your FishEye server.
   - 'Server URL' — The address of your FishEye server.
   - 'Username' and 'Password' — The login name and password you use to access the FishEye server.
   - 'Remember Password' — Put a tick in the checkbox if you want to save your password on disk. Leave the checkbox unticked if you want to be asked for a password every time you start your IDE.
   - If you choose to remember the password, it is stored in a Base64 encoding, so it is not really secure.
6. Click the 'Test Connection' button to check that the connection to the server works.
7. Click 'Apply' to save your changes and continue with server configuration.
8. Click the 'Defaults tab and set up your FishEye defaults. It is important to configure your FishEye defaults correctly. These values will be used to construct the path when you attempt to open a
source file from IDEA in FishEye’s web interface. See Working with your FishEye Repository View in IDEA. Set the default values as follows:

• Server — Select one of your FishEye connections.
• Repository — Select the repository where your source files reside. These are the source files you will be working on most often in IDEA.
• Path to Project — Enter the path to the root of the project in your repository. For example, the path may be one of the following:
  ° blank, if your project is at the root of the repository.
  ° trunk/
  ° trunk/myproject

Example of Default Repository and Path

Let's assume:

• Your FishEye instance is located at:

  http://example.com/fisheye

• You have a repository called **my_project**.
• You are working under the **trunk** directory under this project.

Your settings will be:

<table>
<thead>
<tr>
<th>Default Repository</th>
<th>my_project</th>
</tr>
</thead>
<tbody>
<tr>
<td>Path to Project</td>
<td>trunk/</td>
</tr>
</tbody>
</table>

Screenshot: Configuring FishEye as part of your Crucible server
Screenshot: Configuring your FishEye server defaults
Atlassian Connector

Crucible
Default values for the Crucible review creation dialog

Default Server: EAC Crucible
Default Project: Testing Project
Default Repository: FE

Fisheye
The values below will be used for the construction of Fisheye code pointer links, available in popup menus in your source code editor.

Default Server: SIAC
Default Repository: FE
Path to Project: trunk

Path to the root of the project in your repository. Typically it will be something like "trunk/" or "trunk/myproject". Leave blank if your project is located at the repository root.

Working with your FishEye Repository View in IDEA

This page last changed on Feb 11, 2009 by smaddox.

Using the Atlassian IntelliJ Connector, you can move quickly between your IDE and your FishEye view of your source repository.

Prerequisites

Please make sure that you have installed the Atlassian IntelliJ Connector, as described in the Installation Guide, and defined at least one FishEye or Crucible+FishEye server, as described in the Configuration Guide.

⚠ Make sure that you have configured the default FishEye server, repository and path. The options described below will not work if your defaults are not set up correctly.

Summary of What You Can Do

The Atlassian IntelliJ Connector adds options to the IntelliJ IDEA menus, so that you can:

• Open a file in IDEA by supplying its FishEye URL.
• Open a source file in FishEye’s web interface, with just one click from IDEA.
• Use the copy to clipboard option to share references to your file with others.

Opening a File in IDEA from FishEye

Screenshot: Supplying a FishEye URL to open a file in IDEA
In IDEA, click the FishEye icon on the toolbar or select 'Open FishEye URL' from the 'Go To' menu. Then supply a FishEye URL for your file, as shown in the screenshot above. The file will open in the IDEA editor.

Opening a File in FishEye from IDEA

Screenshot: Moving from IDEA to FishEye
Right-click on your source code in the IDEA editor. The screenshot above shows how you can:

- Open a source file in FishEye's web interface.
- Send other people a link to the FishEye view of your file, using the 'Copy FishEye Link to Clipboard' option.

Configuring your JIRA Server Connections

To configure your JIRA server connection(s):

1. Go to the 'Project Settings' for the 'Atlassian Connector', by doing one of the following:
   - Open the IDEA 'Settings' dialogue, then go to the 'Project Settings' section and click the 'Atlassian Connector' icon.
   - Or you can click the configuration icon on your connector window.
2. Go to the 'Servers' tab.
3. To add a JIRA server:
   1. Click the plus icon on the configuration panel.
   2. A list of server types will appear. Select 'Add JIRA Server'.
   3. A form will appear. Enter the information as follows:
      - 'Server Enabled' — Leave this checkbox ticked (default). If necessary, you can remove the tick to disable particular servers without deleting them. This is useful if your servers are behind a firewall and you don't have access to them.
      - 'Server Name' — A description of your JIRA server.
      - 'Server URL' — The address of your JIRA server.
      - 'Username' and 'Password' — The login name and password you use to access the JIRA server.
      - Remember Password — Put a tick in the checkbox if you want to save your password on disk. Leave the checkbox unticked if you want to be asked for a password every time you start your IDE.
         🚫 If you choose to remember the password, it is stored in a Base64 encoding, so it is not really secure.
   4. Click the 'Test Connection' button to check that the connection to the server works.
   5. Click 'Apply' to save your changes and continue with server configuration, or 'OK' to save your changes and close the configuration tab.
   6. Click the 'Defaults' tab to set your default server (if you have defined more than one JIRA server) and default project.
   7. Now you can configure the JIRA options, as described below.

You can add more than one JIRA server.

Configuring your JIRA Options

1. Open the IDEA 'Settings' dialogue, then go to the 'IDE Settings' section and click the 'Atlassian Connector' icon.
2. Define the maximum number of issues that the connector will show on each screen. At display time, if there are more issues than specified here, the connector will display a 'Get More Issues...' link allowing you to retrieve the next batch of issues from the server.

Working with JIRA Issues in IDEA
Installation and Upgrade Guide for the IntelliJ Connector
Working with JIRA Issues in IDEA

The Atlassian IntelliJ Connector allows you to monitor, add and update JIRA issues from within IntelliJ IDEA.

Prerequisites

Please make sure that you have installed the Atlassian IntelliJ Connector, as described in the Installation Guide, and defined at least one JIRA server, as described in the Configuration Guide.

Summary of What You Can Do

Below are the highlights of the functionality supplied by the IntelliJ Connector for managing JIRA issues within IDEA, with links to the relevant section on this page. Please read the rest of the page for a full reference guide.

- View a filtered list of issues
- Create a new JIRA issue
- Comment on a JIRA issue and viewing comments
- Create a changelist from a JIRA issue
- Log work on a JIRA issue
- View a JIRA issue in an IDEA output tool window
- View stack traces from a JIRA issue and click through to the relevant source file
- Assign an issue to yourself or another user
- Perform workflow actions on a selected issue

Sections on this page:

- Prerequisites
- Summary of What You Can Do
- Accessing the JIRA Issues Tab in IDEA
- Using the JIRA Issues Tab
- Viewing and Updating Issues

Accessing the JIRA Issues Tab in IDEA

To open the connector's JIRA Issues tab in IDEA:

1. Click the Atlassian Connector control button at the bottom of the IDEA screen:

   ![Atlassian Connector control button](image1)

2. The connector window will open. Select the JIRA Issues tab at the top of the connector window:

   ![JIRA Issues tab](image2)

Using the JIRA Issues Tab

The JIRA issues tab shows a list of issues on the selected JIRA server(s). The issues are on the right, the servers and filters are on the left. You can add and remove JIRA servers, as described in the Configuration Guide.

To build the list of issues, you will use a filter. Currently-defined filters are shown on the left of the JIRA issues tab, under the relevant server name. Available filters are:

- A custom filter defined locally in the connector window.
- One or more filters defined on the JIRA server.

Screenshot: JIRA tab in the connector window
In the sections below, we tell you what you can do with the following parts of the JIRA issues tab:

- The tool bar above the list of servers
- The tool bar above the list of issues
- The popup context menu for each issue in the list

**Using the Toolbar above the Servers**

The tool bar above the list of servers provides the following functionality:

<table>
<thead>
<tr>
<th>Action</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Connector Icon]</td>
<td>Open the connector configuration panel, to set up your servers and other options. (See Configuring your JIRA Options in IDEA.)</td>
</tr>
<tr>
<td>![Retrieve Icon]</td>
<td>Retrieve information from all the configured JIRA servers and re-run the currently defined filters.</td>
</tr>
<tr>
<td>![Server List]</td>
<td>Open all the filter lists, so that you can see the server name and filter names for all servers and filters.</td>
</tr>
<tr>
<td>![Filter List]</td>
<td>Close all the filter lists for all servers, so that you can see only the server names.</td>
</tr>
</tbody>
</table>

**Using the Toolbar above the Issues**

The tool bar above the list of issues provides the following functionality:
Divide the list of JIRA issues into groups. You can choose:

- None — Display a flat list of issues, in no particular order.
- Project — Display the issues per project, as defined on the JIRA server.
- Type — Display the issues per issue type, as defined on the JIRA server. For example, this would group all feature requests under one heading, all bug reports under another heading, etc.
- Status — Display the issues per issue status, as defined on the JIRA server. For example, this would group all closed issues under one heading, all open issues under another heading, etc.
- Priority — Display the issues per priority. For example, this would group all blocker issues under one heading, all major issues under another heading, etc.
- Last Updated — Group the issues depending on the date of last modification. The connector groups the issues into logical time periods: today, yesterday, 2 days ago, last week, etc.

Collapse sub-issues under their parents. This option is useful if you have defined sub-tasks in JIRA.

Open all the issue groups, so that you can see the list of issues under every heading.

Close all the issue lists for all groups, so that you can see only the group headings.

Open the selected issue in an IDEA output tool window. See below.

Open the selected issue in your browser, using the JIRA user interface.

Add an issue to the active JIRA server, i.e. the server for which you have currently selected a filter in the left-hand panel.

Quick search for an issue. Enter:

- An issue key — Opens the issue in an IDEA output tool window.
- Some text — Launches a JIRA search in your web browser.

Refresh the contents of the currently-displayed issues list by re-running the selected filter.

Get help on the usage of the JIRA tab (i.e. open this documentation page in your browser).
Using the Context Menu for an Issue

You can perform the following functions for each issue in the list:

- Hover over a line to see a preview of the issue information.
- Double-click a line to open the selected issue in an IDEA output tool window. See below.
- Right-click a line to show a popup context menu (pictured in the screenshot above) with actions that can be performed for the selected issue:
  - Open Issue — Open the selected issue in an IDEA output tool window. See below.
  - View in Browser — Open the selected issue in a new browser window, using the JIRA user interface.
  - Edit in Browser — Open the selected issue for editing in a new browser window.
  - Add Comment — Add a comment to the issue.
  - Log Work — Record the time worked against the issue.
  - Create ChangeList — Add a changelist relating to the issue. A changelist is a set of changes in one or more source code files, making up a logical set of changes.
  - Assign to Me — When you select this option, the issue is immediately assigned to your username on the JIRA server. The connector will send JIRA the username which you used to authenticate to the JIRA server (as described in Configuring the IntelliJ Connector).
  - Assign to User — When you select this option, the connector prompts you for a username. Enter the JIRA username of the person to whom you wish to assign this issue. Note that the username is only validated when the request reaches the JIRA server. If the username is unrecognised, you will receive a remote validation exception message at the bottom of the connector panel. Please try again.
  - Assign to Me and Start Working — Select this option to assign the issue to yourself immediately, and to set the issue status to 'In Progress'.
  - Copy to Clipboard — This option offers a quick way to copy specific information about the issue to your clipboard, so that you can then paste it into another application. Hover your cursor over this option and then choose to copy one of the following:
    - The issue key
    - The issue URL on your JIRA server
    - The issue summary
    - The issue key and summary
  - Perform Available Workflow Actions — Hover over this option to see a list of available actions. Simple actions will be completed when you click the menu option. If the action needs more information, it will open in a browser window.

⚠️ If your update does not appear in the issue preview, click the refresh icon 🔄.

Viewing and Updating Issues

From the JIRA issues tab, described above, you can open a JIRA issue in an IDEA output tool window. For example, you can do one of the following:

- Select the issue and then click the 'Open Issue' icon 🔄, or
- Right-click the issue and then select 'Open Issue' from the popup context menu.

The issue will open in an IDEA output tool window. The window will have two or more tabs, displaying information related to the issue.

Viewing Issue Details

Screenshot: JIRA issue window, showing the issue details
The tool bar provides the following functionality:

- Open the selected issue in your browser, using the JIRA user interface.
- Open the selected issue for editing in a new browser window.
- Record the time worked against the issue.
- Add a changelist relating to the issue. A changelist is a set of changes in one or more source code files, making up a logical set of changes.
- Refresh the contents of the currently-displayed issue by fetching the latest data from the JIRA server.
- Close the issue window in IDEA.

Viewing and Adding Comments

Screenshot: JIRA issue window, showing the issue comments

To add a new comment, click the 'Add Comment' icon.
Viewing Stack Traces

If the JIRA issue contains a stack trace in the issue description or in a comment, you will be able to click the relevant link(s) in the stack trace to open the corresponding source file in IDEA.

Finding Known Issues for the IntelliJ Connector

We track the feature requests and bug reports in the IntelliJ Connector project on our JIRA site. To find a known issue:

1. Browse the list of unresolved bugs and requests.
2. Click the 'Edit' button on the left.
3. Under 'Text Search', type keywords for your problem into the 'Query' field.
4. Click 'View' and browse the summaries of the unresolved issues.
5. Click an issue key to view the details of the issue and any fixes or workarounds.
Creating a review from IDE gives HTTP 500 error

This page last changed on Jan 18, 2009 by smaddox.

**Symptom**

When you attempt to create a Crucible review from within IntelliJ IDEA, you receive an HTTP 500 error.

See bug [PL-635](#).

**Possible Cause**

The project open in IntelliJ IDEA is not connected with the Crucible server configured in the Atlassian IntelliJ connector. So when you try to create a review, Crucible cannot find the relevant changeset or files. Crucible throws a 'not handled' exception which causes the HTTP 500 error.

**Solution**

Add your Crucible server to the connector's configuration, as described in [Configuring the IntelliJ Connector](#).
Troubleshooting java.lang.NoSuchMethodError Exceptions

This page last changed on Jan 18, 2009 by smaddox.

Symptom

On rare occasions, updating the connector using its built-in auto-update mechanism can result in corruption of the connector's binaries. The problem manifests itself in `java.lang.NoSuchMethodError` exceptions being thrown - for example, see bug PL-889.

Cause

The problem is caused by the fact that sometimes the update process fails to update the `atl-assian-connector-commons` jar file, and the old one, which does not contain required code, is used by IDEA.

The root cause of this problem is still under investigation and has not yet been precisely identified. It is suspected that it is caused by the upgrade code failing to delete the old jar file before installing the new one, due to improper file locking.

Workaround

If you encounter this problem, the workaround is to delete the `atl-assian-idea-plugin` directory from your IDEA plugins directory and install the fresh copy of the connector, as described in the documentation. The location of the plugins directory depends on the operating system that you use:

- **Windows**: `%USERPROFILE%\IntelliJdea70\config\plugins`
- **OS X**: `$HOME/Library/Application Support/IntelliJdea70`
- **Linux/Unix**: `$HOME/.IntelliJdea70/config/plugins`

Deleting the connector binary files and installing the new one does not affect your personal settings.
Troubleshooting Server Connection in the IntelliJ Connector

This page describes some common errors you may encounter when setting up your server connections for the Atlassian IntelliJ Connector.

Symptom when Connecting to Crucible

HTTP 404 error when connecting to Crucible even though the URL seems to be correct.

See bug PL-242.

Cause and Solution

In the connector configuration panel, you provide a URL for your Crucible server. When attempting to access Crucible, the connector appends the string '/rest-service/' to the URL provided in the connector configuration panel. The resulting URL is the REST endpoint of the Crucible instance. Therefore, you should enter just the base URL for your main Fisheye+Crucible website.

Example:

- Let's say that the URL for your main Fisheye+Crucible website is http://your.host, and the URL for your Crucible server is http://your.host/cru.
- In the connector configuration panel, you should enter the following as the connection URL:

  http://your.host

  The resulting REST endpoint that the connector tries to reach will be http://your.host/rest-service.

The situation can become even more complicated when the Crucible server is fronted by Apache acting as a proxy. Mappings for Crucible URLs can be configured in an unpredictable way, resulting in weird '404' errors.

Symptom when Connecting to JIRA

HTTP 400 when connecting to JIRA, even though the URL seems to be correct.

See bug PL-643.

Cause and Solution

In the connector configuration panel, you provide a URL for your JIRA server. When attempting to access JIRA, the connector uses SOAP and appends the string '/rpc/soap/jirasoapservice-v2' to the URL provided in the configuration panel. In order for such an URL to work, the JIRA server has to have its SOAP RPC enabled and configured to use this URL.

The simplest way to test if you have your JIRA SOAP endpoint configured correctly is to point your browser at it, with the appended string added at the end. The resulting page should read something along the lines of:

  Hi there, this is an AXIS service!
  Perhaps there will be a form for invoking the service here...

Example:

- Let's say the URL for JIRA that you provided in the configuration panel is http://your.jira/
- the resulting URL that the connector will use to connect to JIRA is http://your.jira/rpc/soap/jirasoapservice-v2

Steps required for configuring JIRA SOAP service are described in the JIRA documentation.
The Atlassian IDE Connector is an add-on for your integrated development environment (IDE). It allows you to work with the Atlassian products within your IDE. Now you don't have to switch between websites, email messages and new feeds to see what's happening to your project and your code. Instead, you can see the relevant JIRA issues, Crucible reviews and Bamboo build information right there in your development environment.
